

DWR Pro™

Professional e-discovery software is no longer reserved for high-budget, large matters. If you have been challenged and frustrated by the technical hurdles involved in processing and reviewing documents in response to an e-discovery order, Digital WarRoom® (DWR) Pro is the first desktop e-discovery application designed for you!

DWR Pro is a single-user, PC based e-discovery application for smaller matters, typically up to 10 custodians or one million documents. DWR is ideal for small law firms, litigation support and other legal professionals, who need a quick reliable way to process, analyze, review, and produce e-mail and business documents in response to litigation, investigations, or other legal challenges.

With DWR Pro, the e-discovery workflow is in one application:

- Create a matter file
- Add PST, Zip, or other container files from custodian collected data
- DWR Pro extracts the mail messages and documents from those files, indexes them and creates a case database
- Use search filters and ECA tools in DWR Pro to help you identify key topics and relationships, and confirm that you have collected from the proper custodians
- Review and tag documents for responsiveness or privilege
- Within days (or even hours, depending on the size of the document set) you can produce native files, load files, or print documents for delivery to courts or opposing counsel – on time and within budget.

Features and Benefits

- Rapid Start: install, process, and review documents within an hour
- Familiar Windows™ application interface is easy to use; view and open email messages in a viewer similar to Microsoft Outlook
- Over 500 file types can be processed, reviewed and produced
- “Drag and Drop” functionality: folders and files from collected media – network drives, hard drives, external storage media – are easily added to the matter
- Complete de-NIST process removes application software, .exe files, and other program files that are not relevant for e-discovery; you search and review only custodian files containing potentially relevant content
- Clear, detailed exception reports help you identify and triage exceptions
- Early Case Assessment: graphical “Who to Whom” feature quickly scope document volumes and determine review resource requirements
- End-to-End Solution: from identification to post-production deposition preparation; control your costs with one complete system
- Catalog and Tag: catalogs all documents, identifies unprocessed documents
- Redaction: robust redaction capabilities
- Export Documents: includes support for Concordance, Summation, and EDRM xml and more simple
- Cost Effective: no per GB fees, use for one matter or multiple matters
- Defensible processes: a large library of reports helps you manage the process, and defend tagging and production decisions.

Digital WarRoom Pro is provided and supported by a team of highly experienced technology and e-discovery experts. Consulting services and guidance are available to assist you with project management, data forensics, data mining, custom reporting and other services. Contact us to get started on your project today.
