eCRFast™

by AST Clinical Solutions

DATA CAPTURE
DATA MONITORING
DATA MANAGEMENT
DATA REPORTING

eCRFast is the most comprehensive electronic data solution for capturing, monitoring, managing and reporting clinical data available on the market. Developed by AST Clinical Solutions, eCRFast was created by clinical research professionals for clinical research professionals. There is no other EDC solution that compares to the robust capabilities of eCRFast and it's unique "no-navigation" interface.

eCRFast brings data visualization to another level by enabling a glance-and-go navigation instead of drilling into countless rows and pages of data. eCRFast makes it easier to interact with massive amounts of data in ways that are powerful and informative. By visualizing thousands of related items at once, users can see trends and patterns that would be hidden when looking at one item at a time.

Technology at work for your studies

AST CLINICAL SOLUTIONS PROVIDES A TOTAL END-TO-END SOLUTION.

In contrast to the traditional client server model for software licensing, the SaaS-based approach is superior. Platform upgrades, IT support, training, form libraries, maintenance, data protection, hosting and regulatory compliance are all provided by AST Clinical allowing you to focus on your core business. Additionally, enhancements to the platform (i.e., integration of the latest innovations) are our responsibility, allowing you to transform spiked capital investments into more distributed and predictable operating costs.

CUSTOM SOLUTIONS

Whether it's for your small pilot study with few subjects or for your global trial with thousands of participants, eCRFast[tm] can be customized to fit your needs.

eCRFast[tm] FEATURES

- INTUITIVE "NO NAVIGATION" INTERFACE.
- ROLE-BASED SECURITY
- INTEGRATION WITH EXISTING SYSTEMS
- READ-ONLY MOBILE ACCESS
- SUPPORTS CDISC
- FAST BUILT TIME
- SIMPLE MID-STUDY UPDATES
- CUSTOM AND BUILT-IN REPORTS
- DATA EXPORT IN VARIOUS FORMATS

Flexible solutions for your trial needs

WEB-BASED ACCESS

Your study can be accessed from any compatible browser. The data is securely transmitted using the latest encryption technologies.
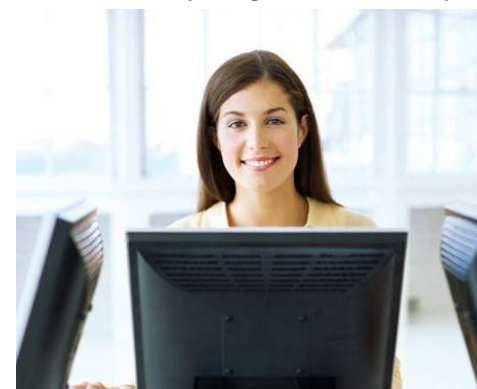

CONFIGURABILITY

Even small changes to a trial can necessitate laborious re-programming. With the growing volume and variety of trials, you need to be able to respond to change requests more quickly and ramp up new trials in short order. To address this issue, eCRFast is a configurable, modular EDC system that quickly leverages the built-in logic of an extensive, easy-to-use forms library.

RAPIDITY

eCRFast is distinguished from traditional EDC solutions due to it's low barrier to entry and it's speed of deployment. With eCRFast, a clinical trial can be ramped up and turned on, in as little as four weeks without front-loaded capital expenses.

COMPLIANCE, SECURITY and RELIABILITY

AST Clinical Solutions offers a financially backed 99.9% scheduled uptime Service Level Agreement. Moreover, data can be hosted on a global network of geo-redundant, tier-one data center network architecture that can facilitate disaster recovery using advanced security measures and offering high reliability.

Through synchronous replicationy, our data is mirrored in nearly real-time across multiple data centers. If one data center becomes unavailable for any reason, eCRFast[tm] is designed to instantly fall back to a secondary data center with no user-visible interruption in service.

- Support for CDISC and other standards
- Support GCP and 21 CFR part 11 requirements
- 99.9% uptime guarantee.
- Customer-selectable geo-location of data

Windows Phone

MOBILE ACCESS

You can view data for using your Windows Phone 7 smartphone. As such, you can glimpse at your data wherever you are without the need of a computer.
