

Calpont InfiniDB® Becomes Strategic Component of the SkySQL™ Reference Architecture, Delivering Scale, Speed and Simplicity to Large Scale Data Analytics

O'REILLY MYSQL CONFERENCE, Santa Clara, Calif. – April 13, 2011 – Calpont Corporation, a leading provider of high-performance analytic databases, today announced a partnership with SkySQL to deliver analytic data solutions for MySQL users as part of the SkySQL™ Reference Architecture. Calpont InfiniDB is a highly-available, column-oriented storage engine designed for large scale BI and analytics data environments. The SkySQL Reference Architecture reduces the cost and complexity of deploying some of the most common data infrastructure applications for high availability, Web scalability, data warehousing/business intelligence, and the cloud.

“By joining forces with the industry’s most critical providers of data infrastructure technologies, such as Calpont, we’re significantly strengthening the reference architecture, which serves as a proven framework for data infrastructure applications,” said Ulf Sandberg, founder and CEO of SkySQL. “Each component of the reference architecture has been validated and tested by SkySQL. And of course, it is backed by our trusted team of MySQL database experts.”

Calpont InfiniDB uniquely complements the SkySQL Reference Architecture by bringing large scale, parallel query capabilities to MySQL users, who also benefit by the familiar SQL interface they are already accustomed to with MySQL. InfiniDB’s massive parallel processing (MPP) architecture is known for its ability to quickly scale-out with consistent query performance across very large data sets, such as those in web analytic applications.

“Calpont is thrilled to be part of the SkySQL Reference Architecture, as we are committed to supporting a company that provides best practices for MySQL database deployment. InfiniDB provides an easy integration framework for the new requirements of business intelligence and analytics deployments for web and other applications, both on-premise and in the cloud,” said Jim Tommaney, chief technology officer of Calpont Corporation. “Together, SkySQL and Calpont enable data warehousing to deliver greater business value, and much faster, with an architecture that is engineered to easily scale as business demands grow.”

SkySQL™ Reference Architecture

The reference architecture leverages community best practices, as well as open and closed source software, pre-selected, tested and validated by SkySQL. A key feature of the SkySQL Reference Architecture is a web-based provisioning system, which provides the graphical user interface that allows the user to uniquely configure a solution for their particular needs. More information on the SkySQL Reference architecture is available at www.skysql.com.

Jim Tommaney of Calpont on a SkySQL™ Reference Architecture Partner Panel

Jim Tommaney, chief technology officer for Calpont, will be on a SkySQL panel with strategic partners to discuss the SkySQL Reference Architecture for deploying data infrastructure [solutions for the MySQL database](#):

About SkySQL Ab

SkySQL Ab, the company behind the SkySQL™ Enterprise subscription, is the first choice in affordable MySQL® database solutions for the enterprise and cloud. Founded by former executives, personnel, and investors of MySQL AB, SkySQL Ab is an open source software company committed to furthering the future development of MySQL database technologies, while delivering cost-effective database solutions and exceptional customer service. SkySQL Ab's customers include ATOS Worldline, Canal+, Deutsche Telekom, Easyflirt.com, FHE3, Lotte.com, Nordic Growth Market (NGM), Richemont and Virgin Mobile. . SkySQL's worldwide headquarters is located in Helsinki, Finland. The company has operations in Asia, Europe and North America. For more information, please call 1(877) 303-5799, or visit www.skysql.com, and follow conversations at www.twitter.com/skysql_ab.

About Calpont

Calpont Corporation is a provider of scalable, high-performance column-oriented analytic databases enabling ultra-fast, deep analysis of massive data sets. InfiniDB Enterprise is the emerging choice for demanding data warehouse, business intelligence, reporting, and analytic deployments. Known for its rapid implementation time, unmatched operational simplicity and extraordinary value, InfiniDB provides a proven solution for data-intensive businesses, including those in the software, online business, telecom, and social spheres. For more information, please visit www.calpont.com, join our open source community at www.infinidb.org, or follow us at twitter.com/calpont.
