

*High Performance Industrial
Flooring Systems — Designed
to Exceed your Expectations*

High performance flooring...

- helps provide the right floor for your customers' needs
- delivers lasting value and return on investment
- offers complete floor systems for a variety of applications
- provides a variety of seamless solutions – including resistance to abrasion, chemicals, and UV rays

Select your system

In order to meet the performance requirements of commercial or industrial environments, choosing the right seamless concrete floor coating system is essential. All Seal-Krete High Performance Flooring Systems are custom specified to exceed your customers' expectations of appearance, durability, and ease of maintenance.

POLY-SHELL™

Utilizing the latest development in Polyaspartic coating technology, Poly-Shell is the most durable coating available. It dries quickly and provides unparalleled rapid return-to-service. It is extremely resistant to heat (temps up to 350°F), UV rays, and a variety of harsh chemicals, including salt, oil, and gasoline. Poly-Shell is also flexible and allows for natural concrete movement without cracking or peeling, making this system ideal for either indoor or outdoor applications. Available in 2 formulas – Poly-Shell 7000 and Poly-Shell 9000.

EPOXY-SHELL™

Epoxy-Shell is an epoxy-based coating system that provides outstanding customer value. Epoxy-Shell blends durability with outstanding adhesion properties, allowing it to be used on a variety of substrates including concrete, tile, and laminates. Its great value, slower dry time, and low odor formulation makes Epoxy-Shell ideal for larger indoor application areas.

DURA-SHELL™

Dura-Shell is a durable two-part water-based aliphatic urethane that provides both heat and chemical resistance and excellent protection against thermal shock. Dura-Shell is formulated with a high tolerance for moisture and excellent bonding strength, making it ideal for indoor/outdoor areas and light industrial projects.

SYSTEM COMPARISON				
	Poly-Shell 7000	Poly-Shell 9000	Epoxy-Shell	Dura-Shell
Cure Time	Fast	Fast	Slow	Fast
UV Resistance	Excellent	Excellent	Not Stable – Yellow	Excellent
Application Temperature	-20° – 120°F	-20° – 120°F	50° – 90°F	50° – 90°F

Poly-Shell™ Systems

POLY-SHELL 7000

- 70% Solids
- 1:1 Mix Ratio
- Mixed VOC < 325 g/L (per EPA Method 24)

POLY-SHELL 9000

- 90% Solids
- 2:1 Mix Ratio
- Low Odor
- Mixed VOC < 100 g/L (per EPA Method 24)

FEATURES AND BENEFITS

- Excellent flow and leveling
- Fastest cure — return to service in hours
- Apply from -20°F to 130°F
- Heat resistant to 350°F
- Superior chemical resistance
- Indoor / Outdoor applications
- Superior resistance to abrasion and impact
- Will not yellow

APPLICATIONS

- Restaurants, commercial kitchens
- Hospitals and care facilities
- Manufacturing plants, warehouses
- Showrooms
- Airplane hangars
- Stadiums, universities
- Residential garage floors, driveways, patios
- Kennels
- Commercial restrooms
- Shop floors

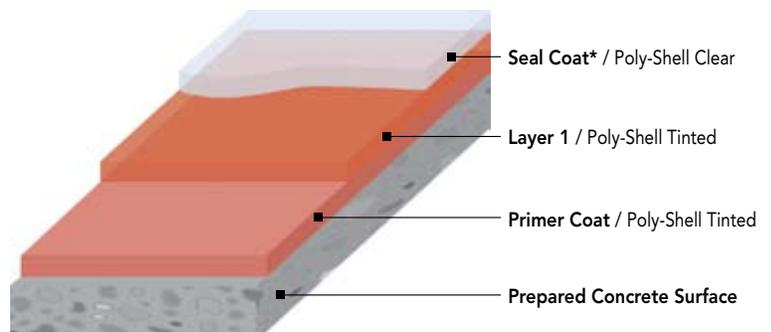

COVERAGE

Step	Coverage (sq. ft./gal)	Wet Film Thickness (mils)
Primer coat / tinted	150	10.7
Layer 1	150	10.7
Layer 2	150	10.7
Grout coat	150	10.7
Seal coat	200	8.0

Poly-Shell Colors System

Solid color, high gloss coating for both interior/exterior commercial and industrial use. Consists of two coats of Poly-Shell Tinted with a Poly-Shell Clear top-coat. Poly-Shell Colors is the most economical solution for a chemical and abrasion resistant flooring system and provides unmatched performance when rapid return-to-service is required.

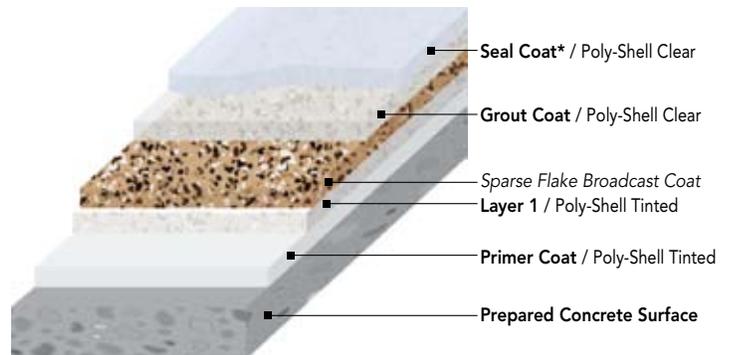

This premium color system is available in standard and custom colors.

Poly-Shell Sparse Flake System

Designed for interior/exterior light industrial or residential use. A durable, high gloss finish that consists of sparsely broadcast vinyl paint chips suspended in a layer of Poly-Shell Clear and top-coated with Poly-Shell Clear. This system is both durable and chemical resistant.

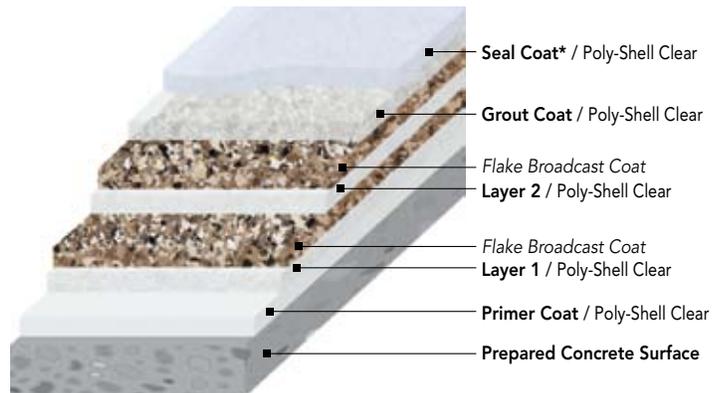

Available in standard and custom flake color combinations.

Poly-Shell Double Flake System

A double-broadcast, multiple coat flake system in which full coverage vinyl paint chips are suspended in two layers of Poly-Shell Clear and top-coated with Poly-Shell Clear for added durability and chemical resistance. Excellent hiding makes this the perfect system for irregular or imperfect interior/exterior concrete floors.

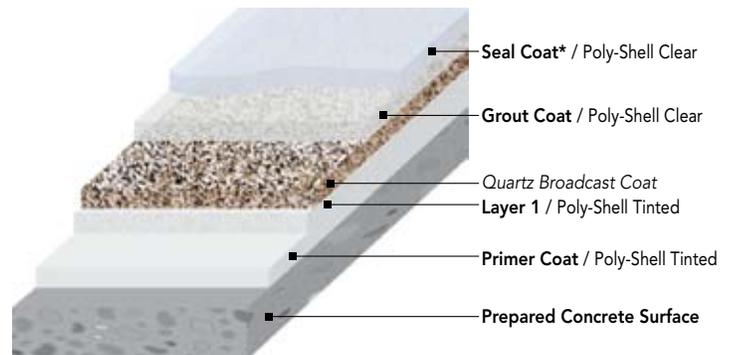

Available in standard and custom flake color combinations.

Poly-Shell Single Broadcast Quartz System

Ideal for both interior/exterior light industrial and residential applications. A single coat of colored quartz aggregate is broadcast into Poly-Shell Tinted and sealed with Poly-Shell Clear, providing a long-lasting, maintenance-free floor. This economical quartz floor has a faster return-to-service.

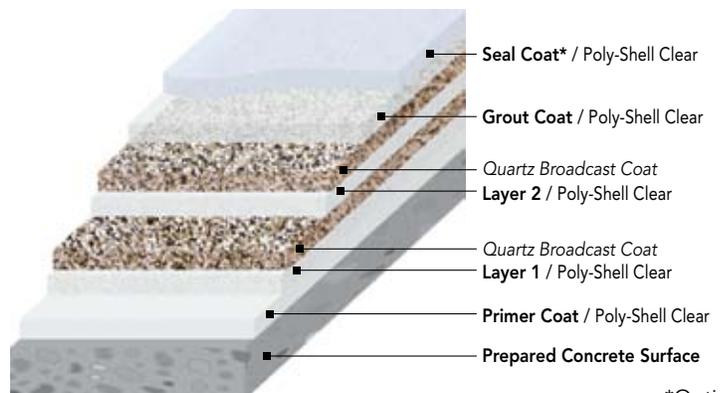

This single-broadcast quartz system is available in standard and custom quartz color combinations.

Poly-Shell Double Broadcast Quartz System

A seamless, double-broadcast polyaspartic quartz system for interior/exterior use designed for maximum durability and ultimate protection. Multiple layers of colored quartz are broadcast into Poly-Shell Clear and top-coated with Poly-Shell Clear for added protection and chemical resistance.

This ultra-durable system is available in standard and custom quartz color combinations.

*Optional

Epoxy-Shell™ Systems

FEATURES AND BENEFITS

- Outstanding adhesion to a variety of substrates, including concrete, quarry tile and plywood floors
- Chemical resistant
- Apply from 50°F to 90°F
- Easier application with slower dry times
- Outstanding value
- Interior applications only
- Self-leveling
- Easy to mix 2:1 ratio
- Mixed VOC < 50 g/L (per EPA Method 24)

APPLICATIONS

- Laboratories
- School hallways
- Animal care facilities
- Manufacturing plants, warehouses
- Pharmaceutical facilities
- Research facilities
- Hospitals
- Cafeterias, restaurants, kitchens
- Restrooms, shower and locker rooms
- Detention facilities
- Retail stores
- Showrooms

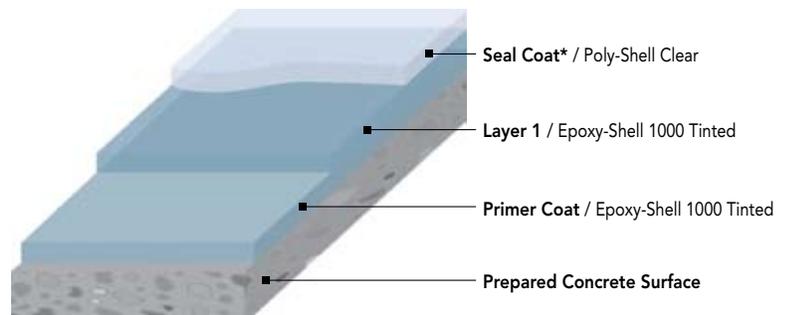

COVERAGE

	Coverage (sq. ft./gal)	Wet Film Thickness (mils)
Primer Coat / Tinted	150	10.7
Layer 1	150	10.7
Layer 2	100	16.0
Grout Coat	100	16.0
Seal Coat	200	8.0

Epoxy-Shell Colors System

Solid color, high gloss coating for both commercial and industrial use. Consists of 2 coats of Epoxy-Shell 1000 Tinted with a Poly-Shell Clear top-coat. Epoxy-Shell Colors is the most economical solution to a self-leveling chemical and abrasive resistant flooring system.

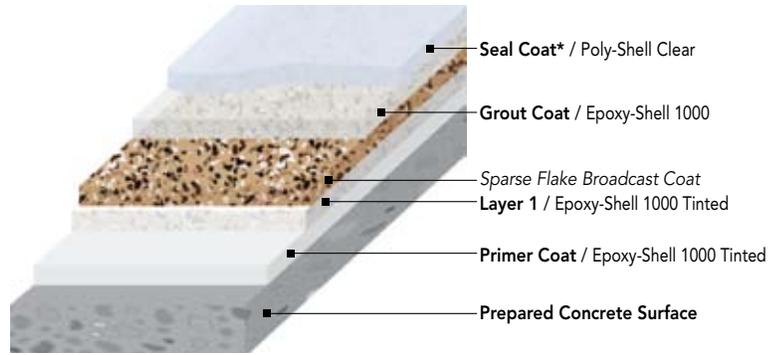

This premium color system is available in 16 colors and is for interior use only.

Epoxy-Shell Sparse Flake System

Designed for light industrial or residential use. A durable, high gloss finish that consists of sparsely broadcast vinyl paint chips suspended in a layer of Epoxy-Shell 1000 and top-coated with Poly-Shell Clear. This system is economical, durable and chemical resistant.

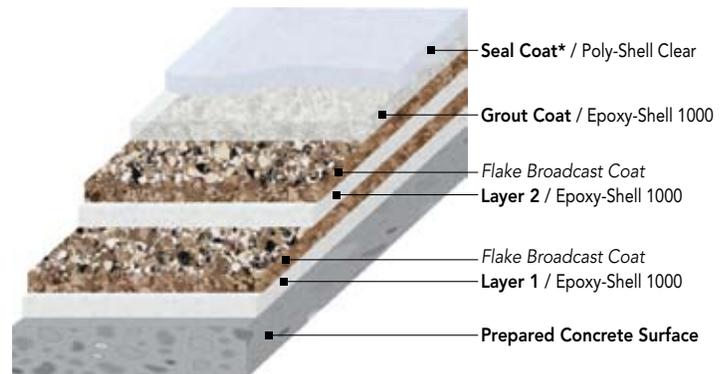

The Epoxy-Shell Sparse Flake System is available in standard and custom vinyl chip color combinations.

Epoxy-Shell Double Flake System

A double-broadcast, multiple coat flake system in which full coverage vinyl paint chips are suspended in multiple layers of Epoxy-Shell 1000 and top-coated with Poly-Shell Clear for added durability and chemical resistance. Excellent hiding makes this the perfect system for irregular or imperfect interior concrete floors.

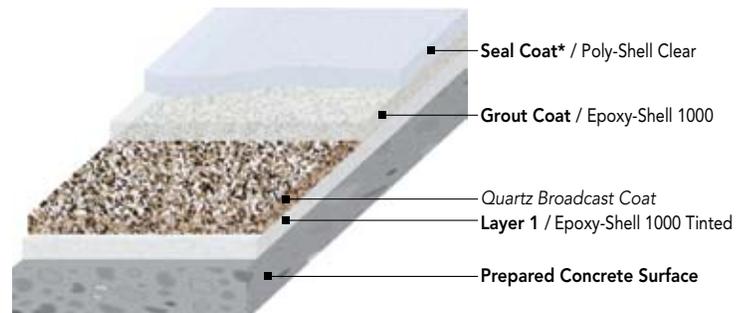

This ultra-durable system is available in standard and custom vinyl chip combinations.

Epoxy-Shell Single Broadcast Quartz System

Ideal for both commercial and residential applications. A single coat of colored quartz aggregate is broadcast into Epoxy-Shell 1000, sealed with Epoxy-Shell 1000 and top-coated with Poly-Shell Clear, providing a long-lasting, maintenance-free floor.

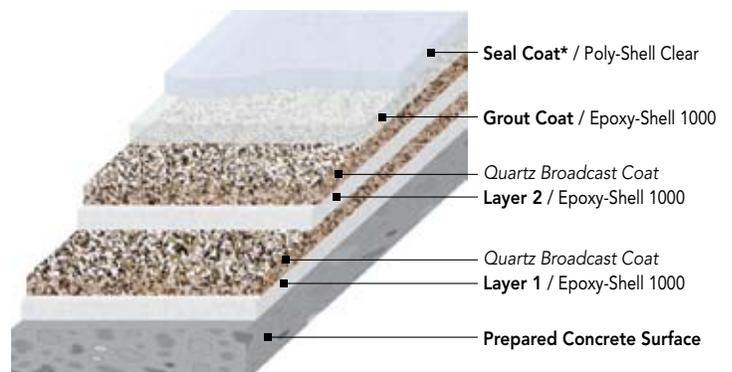

This durable system is available in standard and custom quartz color combinations.

Epoxy-Shell Double Broadcast Quartz System

A seamless, double-broadcast epoxy quartz system designed specifically for maximum durability. Multiple coats of colored quartz are broadcast into Epoxy-Shell 1000 and top-coated with Poly-Shell Clear for added protection and chemical resistance.

This ultra-durable system is available in standard and custom quartz color combinations.

*Optional

Dura-Shell™ Systems

FEATURES AND BENEFITS

- Outstanding protection against thermal shock
- Superior resistance to shrinkage
- Superior resistance to water exposure, high humidity and temperature extremes
- Apply from 50° to 90°F
- High gloss finish
- Chemical resistant
- Outstanding value
- Low odor
- Mixed VOC < 10 g/L (per EPA Method 24)
- Indoor / Outdoor applications
- Passes 140°F Hot Mug Test
- Graffiti resistant
- Passes 4H pencil hardness test

APPLICATIONS

- Food processing areas
- Bottling areas
- Sanitize / wash areas
- Cook / chill areas
- Amusement parks
- Clean rooms
- Refineries, chemical processing facilities
- Pharmaceutical plants
- Kitchens
- Prison floors
- Storage tank / pipeline exteriors
- Warehouse floors

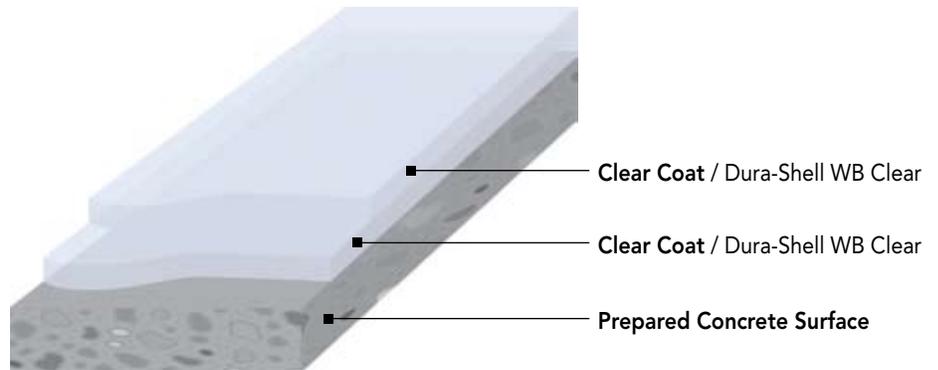

COVERAGE

Step	Coverage (sq. ft./gal)	Wet Film Thickness (mils)
Base coat / tinted	250	6.4
Layer 1	250	6.4
Grout coat	250	6.4
Seal coat	400	4

Note: Not recommended for Quartz Systems

Dura-Shell Water-Based Clear Coat

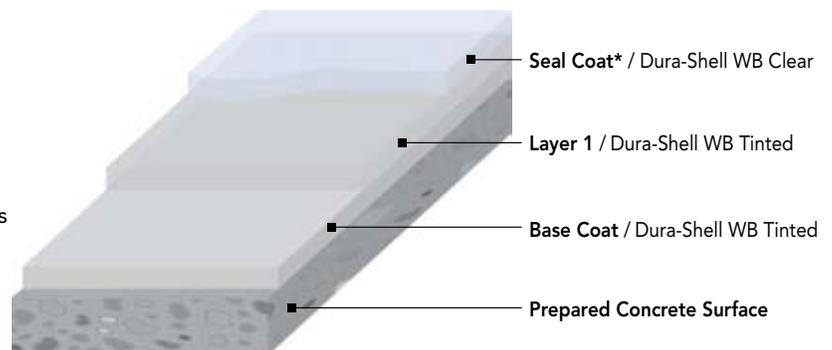

A premium two-part high performance clear water-based urethane. A high gloss finish in a low VOC formula.

Dura-Shell Water-Based Colors System

Solid color, high gloss coating for both interior/exterior commercial and industrial use. Consists of two coats of Dura-Shell WB Tinted with a Dura-Shell WB Clear top-coat. Dura-Shell Water-Based Colors is the most economical solution for a chemical and abrasive resistant flooring system.

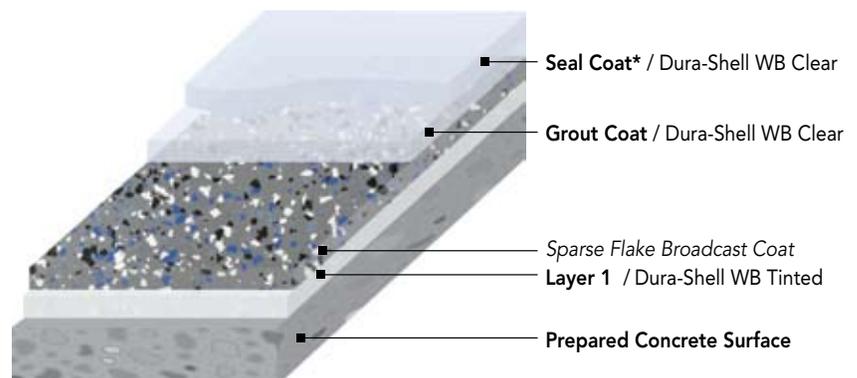

This premium two-component water-based color system is available in two standard colors (Dark Gray and Light Gray).

Dura-Shell Water-Based Sparse Flake System

Designed for interior/exterior light industrial or residential use. A high gloss finish that consists of sparsely broadcast vinyl paint chips suspended in layer of Dura-Shell WB Tinted and top-coated with Dura-Shell WB Clear. This system is both durable and chemical resistant.

Available in two standard colors (Dark Gray and Light Gray) and standard and custom vinyl chip combinations.

Printed color charts approximate actual color. Final color approval should be made from a physical sample. Final color appearance is affected by specific overlayment, surface texture, methods of application, type of sealer, lighting and contractor placement technique. For best results when using more than one gallon, intermix like colors to ensure color consistency.

Prepare your surface area

Thorough preparation is the key to a successful outcome. Taking time now to make sure your surface is free of future roadblocks will aid in the efficiency of project completion and ensure the best possible outcome.

SURFACE PREPARATION

Apply only to concrete surfaces that are sound and solid, free of dust, dirt, grease, and oil. New concrete should be cured a minimum of 30 days. Prepare surface by mechanical means to achieve an International Concrete Repair Institute Guideline No. 03732 concrete surface profile of CSP 3.

TEST FOR MOISTURE AND pH LEVELS

Moisture testing of the concrete surface should be performed. Moisture vapor transmission rate should not exceed 3 lbs. per 1000 sq. ft. in 24 hours as tested in accordance with ASTM E 1907. Test for excess moisture beneath the surface with ASTM D 6263 "Standard Test Method for Sheet Method". Bare concrete should be tested for pH and have a level between 7 and 11.

TEST FOR OIL AND GREASE

When oil and/or grease is present, you risk successful penetration and adherence of the High Performance Industrial Flooring System. The easiest way to test for grease that is not visible is to mist water on the surface. If the water beads up, contaminants are present and must be removed. If the water is absorbed into the concrete surface, there are no oils present.
