CERTREC

Helping You Manage the Regulatory Process to Your Advantage

50.59 Issues RG 1.70 10 CFR 54.37 License Amendment Requests ROPs

What if complying with these requirements were easier?

Introducing the Office of Licensing and Compliance – a complete NRC solution that helps you manage the regulatory process to your advantage.

For more than 20 years, licensing and compliance professionals have trusted Certrec for support in obtaining and maintaining their NRC licensing.

In this time of rising generation demands, resource shortages, and the loss of “tribal” knowledge due to workforce retirement, Certrec’s Office of Licensing & Compliance (OLC) allows you to better:

- ▶ Maintain the Operating License
- ▶ Manage the Impact of the Regulatory Process
- ▶ Manage Communication with Multiple Regulators

Staffed by NRC compliance experts with more than 250 cumulative years of nuclear licensing and compliance experience, our Office of Licensing and Compliance associates are integral participants in Regional Utility Groups (RUGs) and industry advocates with the NRC. Having walked in your shoes, we understand the intricacies of COLAs, ROPs, FSARs, and licensing compliance.

*“The Office of Licensing and Compliance has the potential to **capture \$200,000** or more in hard-dollar **savings** per year per site.”*

- Ted Enos, Certrec
