CBOSS PARTNERS WITH BEST DOCTORS TO PROVIDE INTERNATIONAL ACCESS TO SECURE ONLINE HEALTHCARE PAYMENTS

For Release – April 21, 2011

Boardman, OH –CBOSS, Inc., the leading provider of PCI DSS-compliant, secure online payment solutions for healthcare as well as government and regulated industries, and Boston-based Best Doctors, Inc., a world leader in medical consultation, have announced the launch of their partnership. Best Doctors is now offering its national and international clients access to online payments via CBOSS' PCI-compliant payment solution known as the Central Payment Portal (CPP).

Best Doctors provides interconsultation and insurance in more than 30 countries, and required a robust, fully compliant solution to process varied payment types within one central system, capable of supporting multiple languages. In partnership with Best Doctors, CBOSS delivered the required features, reliability, and scalable product with the vital security that Best Doctors demanded in a solution.

Since the go-live date the system has processed thousands of transactions per month originating from all over the world. The initial rollout of the project supports payment processing in both English and Spanish with plans to add additional languages.

The CBOSS CPP is a secure web-based hosted service that allows businesses to automate manual payment processing operations, creating significant improvement in operational efficiency and provides multiple integration layers with legacy financial systems. In addition to multi-language capability, the CBOSS CPP has allowed Best Doctors to streamline their revenue collection process, previously disbursed across multiple international services, into a single, PCI Compliant, centralized software solution. CBOSS' CPP offers a single method for payment integration from multiple sources and gives Best Doctors the ability to manage and process reports from their headquarters location.

“Compared to other systems considered, we have been able to easily overcome the language barrier and offer multiple dialects through one central system,” said Curtis Winn, Director, Corporate PMO for Best Doctors, Inc. “In addition we can offer our web based clients the security, reliability and PCI compliancy for processing credit card payments through CPP”

“Partnering with Best Doctors has been an ideal relationship,” said Aaron Lego, CBOSS business development director. “When all stakeholders have the freedom to focus their efforts on what each does best, the result is true synergy, parallel success and optimum customer service.”

About CBOSS

From enterprise software solutions to managed services, CBOSS specializes in the design and implementation of portal solutions for e-payment processing, workflow automation and content management using industry-standard platforms and tools. Since 1994, over 700 businesses and government agencies have looked to CBOSS to deliver feature-rich services and solutions that are cost-effective, reliable and secure. CBOSS has achieved Level 1 compliance with the Payment Card Industry (PCI) Data Security Standard, which provides the highest levels of security for e-commerce and other e-payment processing services.
