Champion Medical Technologies Partners with Corepoint Health for Interoperability

Corepoint Health provides web services-based integration solution for Champion Medical Technologies and their leading medical tracking applications

Frisco, Texas – April 28, 2011 – Corepoint Health, a leader in healthcare integration software, and Champion Medical Technologies, an applied information technology company dedicated to innovative tissue and implant tracking in the medical industry, have announced a comprehensive integration solution for health care facilities seeking seamless integration with Champion Medical Technology applications, such as GraftTracker® and UDITracker®. Case entry data is transmitted from Corepoint Integration Engine directly into these applications using a secure web services protocol.

"Champion Medical Technologies is excited to offer this complete integration solution to our customers. Corepoint Health provides a seamless integration that completely automates data transfer to our medical device tracking software," said Peter Casady, CEO of Champion. "Nurses working in the operating room can now spend more time on patient care and less time documenting implant data."

Corepoint Health delivers a robust integration platform used to easily develop and test interfaces and facilitate communication of electronic data between healthcare applications. For applications such as GraftTracker and UDITracker, a straightforward HL7 integration solution, which also leverages web services-based communication, provides a high value complete solution for their health care customers.

Working as partners, Champion Medical Technologies and Corepoint Health have delivered on these benefits. Typical HL7 integration scenarios include delivering relevant patient data from a customer's surgery or operating room application to UDITracker or GraftTracker. Data changes are then mapped with Corepoint Integration Engine and securely communicated directly into Champion Medical Technologies' application through web services. Champion Medical Technologies and Corepoint Health are committed to working closely together with the objective of delivering a cost-effective, robust integration offering for their customers, utilizing HL7 standards, XML, or other data formats.

"A smooth data flow between applications is essential in today's healthcare application environments," said Phil Guy, CEO of Corepoint Health. "Champion Medical Technologies is a leader in providing valuable tissue and implant tracking applications for hospitals, and we are proud to work closely with them in delivering a complete integration solution which leverages a web services approach and offers their customers greater flexibility in meeting their seamless data flow requirements."

Corepoint Health was recently recognized as being #1 in the Interface Engines market segment of the 2009 & 2012 Top 20 Best in KLAS Awards: Software & Professional Services report (©2011 KLAS Enterprises, LLC. All rights reserved. www.KLASresearch.com).

About Champion Medical Technologies

Champion Medical Technologies is an applied information technology company dedicated to revolutionizing how the medical industry tracks valuable inventory. Champion Medical Technologies has over 25 years of software design and development experience in healthcare and 20 years of experience in tissue graft and medical device storage, distribution and tracking. Their programs, including GraftTracker® (tissue tracking software), UDITracker® (implant tracking software), were specifically designed to help hospitals manage their growing inventory of expensive medical devices while improving patient safety and ensuring Joint Commission and FDA compliance. For example, medical device recall investigations now take seconds rather than days or weeks. These programs allow hospitals to convert from hand-written implant log books to an automated system.
