**CBOSS Grows Hometown Health Network Partnership—  
Adds New Online Services for Healthcare Organization Members**

BOARDMAN, OH— CBOSS, Inc., a leading provider of PCI DSS-compliant, secure online payment solutions for healthcare as well as government and regulated industries, today announced that the firm’s ongoing partnership with the Hometown Health Network has led to the development and launch of two important new online payment services, in addition to a new online portal presence.

The CBOSS *Central Payment Portal* (CPP) provides a secure, web-based, hosted service that allows businesses to automate formerly manual payment processing operations, creating a significant improvement in operational efficiency. CBOSS’ CPP offers a unified interface for payment integration from multiple sources and provides Hometown Health’s member hospitals and private practices the ability to run and process reports from one location. CBOSS’ Level 1 PCI-DSS compliance ensured that the CPP was able to deliver the reliability and security that Hometown Health insisted upon for their payments solution for their members. The Central Payment Portal offers patients easy access for making credit card or e-check payments online, and the CPP will centralize all financial data to allow the financial services and administration departments to review data across the Hometown Health member networks in real time.

Additionally, due to the continued cost pressures being faced by health care institutions and the resultant interest in cash flow management, CBOSS is pleased to introduce the new CPP *OnTime!* module. This plug-in module to CBOSS’ leading *Central Payment Portal* online payment solution provides additional Payment Card Industry-compliant capabilities for fully configurable recurring payments to be scheduled by health care customers, making payments both fast and convenient. CBOSS is also offering access to a new bill presentment solution (EBPP) to augment the capabilities of the CPP, with a growing number of clients expressing interest in providing their customers with the ability to view, print, and then pay their bills or invoices entirely online.

CBOSS, based on Boardman, Ohio, is well known for its management of the Ohio Bureau of Motor Vehicles (BMV) OPLATES.com website, which includes the processing of all online payments for license plates from the site. CBOSS has provided the State of Ohio with these services under contract since 2000. CBOSS is also becoming well known in the health care industry for the CBOSS CPP software, due to the firm’s PCI DSS Level 1 regulation-compliant capabilities.

“Over the past ten years, CBOSS has gained a well deserved reputation as the premier developer of robust solutions to enable businesses and government agencies to offload

security and compliance concerns related to online payment processing,” said Aaron Lego, Director of Business Development. “Providing these new and valuable capabilities the Hometown Health network member hospitals is another example of how we work closely with our partners to anticipate their needs and ensure they are met.”

Both of the new *CPP* modules for bill presentment and recurring payments are available to current and future customers. To inquire about adding these features to a current system, or to inquire about the benefits of the *Central Payment Portal*, visit [www.cboss.com/securepayments](http://www.cboss.com/securepayments) or email [cppsales@cboss.com](mailto:cppsales@cboss.com).

### **About CBOSS**

From enterprise software solutions to managed services, CBOSS specializes in the design and implementation of portal solutions for e-payment processing, workflow automation and content management using industry-standard platforms and tools. Since 1994, over 700 businesses and government agencies have looked to CBOSS to deliver feature-rich services and solutions that are cost-effective, reliable and secure. CBOSS has achieved Level 1 compliance with the Payment Card Industry (PCI) Data Security Standard, which provides the highest levels of security for e-commerce and other e-payment processing services.
