

ArtistScope Web Reader is an integral component of the ArtistScope Site Protection System (ASPS) and is the only web reader custom designed for and dedicated to the copy protection of web page content and media. While displayed in the reader window, your information and page media is protected from all copy methods, unauthorized download and data leakage to the Internet.

### Why use the ArtistScope Web Reader?

The ArtistScope Web Reader is the most secure solution for all web page content and media and the only solution recommended where the prevention of copy and unauthorized redistribution is mission critical... a "for your eyes only" environment that cannot be exploited.

The ArtistScope Site Protection System (ASPS) can provide the most secure copy protection imaginable, securing all media, data and links that are displayed on your web pages. While ArtistScope Web Reader is not intended to compete with popular web browsers, it does possess the same functionality and support for all of the different types of web page content and scripting as the popular web browsers do. However it only displays protected content. If a link on a protected page takes the visitor to an unprotected page, it will be opened automatically in the default browser.

Site owners wanting to protect their livelihood can utilize copy protection and access rights solutions, but their ultimate security cannot be maximized when still at the mercy of web browsers and numerous free add-ons specifically designed for pirating media and generally abusing usage policies. That is until the advent of ArtistScope Web Reader. ArtistScope Web Reader overcomes these problems because it is especially structured to enhance the security of web content rather than expose it.

### ArtistScope Web Reader Licensing

The ArtistScope Web Reader is a free download. Webmasters wishing to copy protect their web site and enable it for the use of ArtistScope Web Reader can license the ArtistScope Site Protection System (ASPS).
