

MobileFrame Archibus™ Mobile Management Solution

The biggest challenge facing Facilities Managers today is the amount of manual data entry the craftpersons need to complete out in the field. Not only does field data need to be collected about the job, but it also needs to be entered back into Archibus. This manual, labor intensive process is extremely inefficient and costly for the organization.

We have developed a library of configurable mobile applications that enable any sized facilities management department to completely eliminate field based data collection. Our solutions work right out of the box, and allow users to customize them as business conditions dictate. All of our applications provide the ability to securely collect rich data types including: Digital Photos, Barcode Scans, Digital Signature Capture, Sketches, Voice Notes, GPS, RFID, Biometrics and Real-Time Notifications.

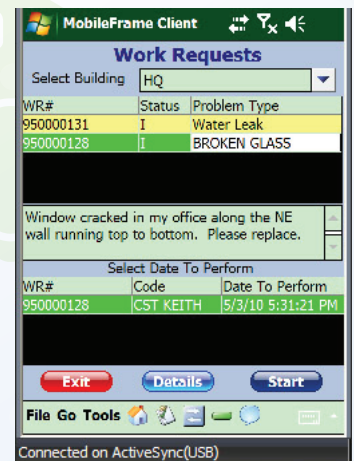

Our MobileFrame Archibus™ Mobile Management Solutions is a full suite of mobile apps, including:

- **Work Order Management** - provides the ability to create work orders, assign work orders, and track time & parts consumption
- **Building Operations** - enables the ability to perform generator, fire pump, and water system inspections as well as electrical closet & key management
- **Asset Management** - facilitates the efficient tracking of equipment, assets & decor with the ability to create, verify and update multiple records
- **Property Management** - extends back office data such as property abstracts, lease abstracts & records search to the field for easy document retrieval and viewing

With MobileFrame, your organization gains a competitive advantage by replacing inefficient and error-prone paper forms with automated mobile solutions that boost productivity and increase revenue. Our mobility platform enables businesses to easily create, deploy, and administer sophisticated custom mobile applications in minimal time and with minimal effort.

Benefits of automating your existing data collection processes include:

- Increased staff productivity
- Improved customer service
- Less data transcription errors
- Eliminate redundant manual data entry
- Decreased downtime in the field
- Reduced paper costs
- Real-time access to information

Other Fully Integrated Mobile Applications...

Our Archibus[™] mobile solution is configurable around your own requirements and better yet, there is no coding required. That means that you can have completely custom mobile applications with no custom programming. And, as your requirements change over time, you can easily make changes to your applications and deploy them to the field in record time. Some applications include:

- **Work Order Management:**
 - o Create, assign & manage work
 - o Craftperson assignment & time track
 - o Parts consumption
 - o On-demand and PM work

- **Building Operations:**
 - o Generator, fire pump & water systems inspections
 - o Electrical closet management
 - o Key management

- **Asset Management:**
 - o Furniture Inventory: create new furniture, verify furniture, update multiple records

- **Equipment Inventory:**
 - o Create new equipment, verify equipment, update multiple records

- **Décor Inventory:**
 - o Create new décor, verify décor

- **Property Management:**
 - o Property records search
 - o Search records by records box ID
 - o Lease records search

- **Assessments:**
 - o Print, copy & fax assessments

- **and much more...**
