D3 Security Releases White Paper on Incident Reporting Systems

Company shares expertise on incident management software for organizations looking for dependable security solutions

VANCOUVER, BC – D3 Security Management Systems, Inc., a developer of security management software, has released its latest white paper, "The Top 10 Features to Look for in an Incident Reporting System."

The paper provides the most important items a company should consider—as well as avoid—when searching for an incident management system. Its purpose is to allow readers to make an informed decision on the solution that's right for them as quickly and cost-effectively as possible.

"At D3 Security, we know how important it is for an organization to have a security incident management solution that integrates with their existing systems and offers a high level of flexibility and reliability," said Gordon Benoit, president. "With this white paper, we are sharing some of our expertise on the subject with business owners and managers around the world."

Among other helpful tips, the white paper details the importance of features like web access and data capturing in the implementation of incident reporting systems. It also points out things to avoid, including software that takes too much time and money to set up or systems that require a great deal of customization by the end user. For each, the paper explains exactly why that particular element should be welcomed or avoided.

D3 Security's incident reporting software provides top-tier workflow capabilities that allow for automated communication between personnel and departments within an organization. Its systems are very flexible, meaning that end users can depend on them for the quick and efficient handling of all types of security issues.

"Our company strives to not only be a leading provider of security solutions for organizations across North America, but also a thought leader in our field," Benoit said. "It is our goal to help educate all types of users so they know what to look for in an incident management system."

"The Top 10 Features to Look for in an Incident Reporting System" is free and available for download by bloggers, organizations and anyone who is interested in learning more about finding a reliable security incident reporting solution.
