

## Proven Accounting Solutions For Government Contractors

**JAMIS SOFTWARE** was developed by government contractors over 20 years ago. It has become the proven job cost, billing, accounting and labor management solution for many of the most respected names in government contracting today. The software was built by contractors specifically to meet the job cost accounting functionality essential to working with the government.

JAMIS is a powerful job cost system that provides ALON, Inc. the foundation for growth as a rapidly growing government contractor and is designed to handle all of ALON's complex requirements for our various types of contracts. ALON was able to bring the system into production in a very short timeframe (four weeks) and JAMIS provided us great tools to perform the data conversion which was critical for us to meet our aggressive implementation schedule.

### PROJECT ORIENTATION

JAMIS is a project-oriented accounting package with unique functionality for government contractors. The feature-rich design streamlines the complexity of accounting and compliance for project-driven businesses. The JAMIS suite of integrated project-cost and financial modules provides businesses with vital, up-to-date information throughout each contract's life cycle.

### PROVEN EXPERTISE AND SCALABILITY

JAMIS customers process millions of e-timecards and invoice billions of dollars every year and rely on JAMIS to provide detailed visibility into their projects. JAMIS' solutions are scalable, fitting small to large businesses and adapting as business and markets vary. JAMIS offers the option of licensed software or Software as a Service (SaaS) from a secure data center.

### FACILITATE DCAA, FAR AND CAS COMPLIANCE

JAMIS' built-in features help businesses meet all DCAA, FAR and CAS requirements with accurate billing, reporting and audit functionality.

### BUSINESS INTELLIGENCE TOOLS

JAMIS provides accessible project and financial information to help manage and make optimal, informed decisions. The reporting features generate timely reports, queries & drilldown data cubes that include contract and project P&L information.

### PROJECT MANAGEMENT

JAMIS helps prevent project overruns with tools to monitor labor, material, budget and cost status. These features provide insight to manage projects real-time, to anticipate overruns and to keep projects profitable.

### STREAMLINE PROCESSES THROUGH AUTOMATION

JAMIS fully integrates job costing and job billing to eliminate spreadsheets and isolated islands of information. JAMIS automates management of burden rates (i.e., Fringe, Overhead, G&A and FCCM) and applies them to projects for billing and revenue recognition. Provisional billing rate retroactive adjustments are handled automatically. The flexible design for applying overhead application handles any indirect rate structure for both multi-site and multi-company organizations.
