

GGG ASPIRE

A Proven, Modular Approach to Energy Management for Industry:

- ▶ ASSESS
- ▶ STUDY
- ▶ PLAN
- ▶ IMPLEMENT
- ▶ REASSESS
- ▶ EVOLVE

ENERGY MANAGEMENT. EFFICIENCY. GREEN. SUSTAINABILITY.

Everyone's talking about it. We've been doing something about it.

For over 20 years, we have served our clients by improving efficiency and reliability through our unique delivery of proven technologies and services.

Our expertise is in the design, development, implementation, and maintenance of systems, software, devices, and equipment used to monitor, control, automate, and operate facilities.

GGG ASPIRE™.

ASPIRE is our modular approach designed to help clients achieve their energy management goals. Whether you're just starting out or well on your way, our proven solutions can help you produce real results faster.

Our solutions focus on coupling our expertise with the systems and technologies that produce and use information to optimize processes and manage energy. They enable our Clients to Collect, Measure, and Act to reduce consumption - and acting upon it is what ultimately makes the difference to people, profit, image, and planet.

Through ASPIRE, we work independently or within integrated teams of owners, architects, technology providers, OEM's, and others to identify, design and implement sustainable improvements.

Last year alone, GGS delivered over \$35M dollars in Consulting, Design, and Implementation services associated with Energy Generation, Consumption, Efficiency, Reliability, and Optimization projects for leading industrial, campus, and municipal facilities in North and South America.

Those projects produced millions of dollars in energy savings, reduced grid consumption and carbon footprint, and improved system reliability and efficiency.
