

Cebu Stone is a cost effective, lightweight and durable thin block veneer. Available in various textures and finishes, Cebu Stone is perfect for both new construction and building remodel projects.

The exclusive AccuTab Set System technology provides an efficient and accurate Cebu Stone installation through its cast in place tab that provides a built in mortar joint. Installation rates are many times faster than traditional masonry systems. Cebu Stone is typically painted in the field after installation, but can also be manufactured with color added.

Cebu Stone manufactures a full line of concrete masonry units to complete your project, including corner blocks and trim pieces. Add the beauty, texture and rough hewn look of splitface block to interior or exterior projects. Design options are limitless.

Cebu Stone can be used over, or in conjunction with, the following substrates:

- masonry surfaces (tilt up, CMU)
- wood framing
- metal studs
- combined substrate overlaps (masonry adjoining framing)

Your projects may also achieve LEED credits 3.1, 3.2, 4.1, 4.2, 5.1, and 5.2 through conservation of materials and resources. Cebu Stone has been successfully installed on national fast food chain stores, national car care service stations, strip mall shopping centers, industrial commercial buildings and light use commercial buildings.
