SAP TEST MANAGEMENT

Reduce 80% of your SAP testing effort and risk

The SAP Testing Challenge

If you're like most SAP customers, you're probably challenged with capturing business processes for testing purposes, creating and maintaining test scripts, and efficiently running your test scripts in the shortest time possible.

How can you create, maintain, and run your SAP test scripts when introducing new functionality or upgrading your system and always meet your deadline?

The Test Management Solution for SAP You've Been Waiting For

Never worry about capturing business processes and maintaining your test scripts again – they always stay fresh, automatically!

Panaya's Test Management software-as-a-service allows you to test not only critical business scenarios, but all scenarios that are affected by SAP system changes.

A typical test engineer or key user can run 15 to 30 test scripts per day. Using Panaya's Test Management solution, they can run up to 150 scripts per day – and the results are logged automatically.

Whether you're installing a Support Pack, an Enhancement Pack, preparing for a new rollout, or upgrading to ECC 6.0, Panaya's Test Management solution will save you 80% of your testing time and effort.

Rapidly creates, automatically maintains, and effortlessly runs your SAP test scripts

Self-Adapting Test Script:

How it Works

Test scripts are rapidly created while you simply go through the motions of your business process, without wasting any of your precious time on programming or writing test scripts. The resulting test scripts can be **effortlessly run either manually or automatically**, using Panaya's test player.

While performing testing, **your test scripts self-adapt** to changing conditions, like data values that need to be changed each time a test is run (e.g., order number). This means zero effort is required to maintain your test scripts.

Even better, it lets you **easily switch between automatic and manual run modes**, to make sure your test runs don't stall because of unexpected results.
