

Panamorph DC1

Panamorph's DC1 is the world's first completely sealed anamorphic lens! Equipped with precision tolerance optics and enhanced optical coatings, it produces the best contrast available in an anamorphic lens and maintains excellent light transmission. When paired with a projector that has the correct anamorphic scaling modes, the DC1 eliminates the black "letterbox bars" and recreates the fully immersive digital cinema experience in the home. This results in 80% more image area than widescreen movies shown on conventional 16:9 screens of the same height.

- Highest contrast expansion lens available due to enhanced custom, multilayer dielectric coatings in a patented optical design
- Industry exclusive sealed optical path to minimize contaminants that degrade contrast
- New angled corrector for maximized contrast
- Sleek, elegant and finely finished with a contemporary design for the ultimate showpiece
- Fully compatible with Panamorph's high performance transports and mounting kits
- Lockable lens positioning with locking screw and notches in the u-bracket make for an easy install
