Windows PowerShell: You Can't Ignore It, So Here's What You Need to Know Webinar on Thursday, July 14, 2011 12:00 p.m. ET / 9:00 a.m. PT

1 June 2011 – MVP Systems Software, Inc., the leader in enterprise batch job scheduling and workload automation software, and Windows IT Pro Magazine, the leading publication for Windows-related technologies, have announced an exciting webinar on Windows PowerShell for July 14th at 12PM EST.

Whether you love PowerShell, aren't comfortable with it, or don't even know what it is, it's the new Microsoft management technology that you can't ignore. Microsoft is continuing to build more and more management infrastructure on top of Windows PowerShell, so if it isn't in your environment already, it's going to be there soon - like it or not. The good news is that there's a lot to like, and even love, about PowerShell.

Join Windows PowerShell MVP and expert Don Jones for a look at what PowerShell means to you, why you can't afford to ignore it, and what you need to know to make PowerShell a safe, productive, successful part of your environment. Don will explore Microsoft's vision for PowerShell and examine the problems it solves. He'll show you PowerShell simple security system and demonstrate deployment options. He'll also show you some quick tips for using PowerShell - including how to leverage it as a true command-line shell that's easier to learn and use than older, complex scripting languages. Set yourself up for better Microsoft manageability with Windows PowerShell - today!

You can register for the webinar at the following link:

Don Jones is one of the world's leading experts on the Microsoft business technology platform. He's the author of more than 35 books, and is a top-rated speaker at technology conferences worldwide. He writes features and monthly columns for numerous print and online publications, is a multiple-year recipient of Microsoft's prestigious Most Valuable Professional (MVP) Award, and serves as Editor-in-Chief for Realtime Publishers

About JAMS (Job Access and Management System)

JAMS is the only job scheduling system built on a .NET framework. JAMS is the first enterprise job scheduling system that can be leveraged by both IT Operations Personnel and Application Developers. With its roots in Windows, JAMS also supports running processes across a variety of operating systems (UNIX, Linux, System i, OpenVMS, etc.) and applications (SAP, SQL, Informatica, Oracle, etc.) To learn more about JAMS, please visit www.JAMSScheduler.com or call 800-261-JAMS.
