VPDC
VIRTUAL PRIVATE DATA CENTER

Private and secure cloud computing

Powered by
vmware®

The Virtual Private Data Center (VPDC) from Global Net Access (GNAX) is a complete, scalable IT solution that meets the demands of small businesses and large enterprises alike, providing a dedicated pool of resources for processing power, memory and storage.

Why VPDC?

- Dedicated server resources
- Complete server and network redundancy
- VMware client and web access for provisioning and management
- Enterprise multi-tiered SAN storage by HP StorageWorks
- Leading edge network infrastructure powered by Cisco Nexus

Get Started Today

Step One: Build
- Customize and choose the dedicated configuration through our easy-to-use online ordering system.

Step Two: Manage
- Once your VPDC is provisioned by our engineers, the ball is handed off to your organization to manage your applications and services.
- All major Linux and Windows Server Operating Systems are supported.
- Access your VPDC through VMware vCenter to manage resource pools and simply drag-and-drop to deploy new virtual servers.

Step Three: Scale
- Efficiently scale your VPDC as the demands and requirements of your business change. Additional dedicated resources can be added easily through our online ordering system.

Pricing

- Starting at $538 per month (for 2 dedicated VMware servers)
