

TelcoBridges announces the launch of Tmedia 1+1, made possible through its new TMG-CONTROL version 2.6

Boucherville, QC, June 15th, 2011 – TelcoBridges Inc., the preferred hardware and software supplier for telecom resellers, system integrators, and solution developers, today announced the launch of the Tmedia 1+1 solution, made possible through its new software release TMG-CONTROL version 2.6.

TelcoBridges Tmedia 1+1 answers service providers' needs for five nines reliability, offering a redundant gateway that ensures high-availability. This 1+1 feature set is available for the Tmedia TMG800, TMG3200 and TMG7800, creating a redundant system from 1 to 64 T1/E1s, 1 to 3 DS3s or 1 STM1. Our clients are looking to ensure that their VoIP systems are as infallible as their TDM networks, and TelcoBridges 1+1 provides that high level of redundancy and high availability they need to remain competitive.

The globalisation of the business world has meant more and more corporations work around the clock, offering their clients products and services twenty-four (24) hours a day, seven (7) days a week; requiring unlimited access to networks/systems every day, all day. Service providers, both large and small, must ensure their systems are running at all-times, with the exceptional planned down-times for upgrades during low traffic hours. TelcoBridges is in tune with the needs of its clients and has responded with its new Tmedia 1+1 product offering.

“The addition of 1+1 to the product should boost our Tmedia brand into a category of its own. Recognised within the industry for its high density, carrier-grade, high performance Tmedia VoIP gateways paired with the TB Support Program (ensuring incomparable technical support), TelcoBridges is the clear choice for carriers looking for reliability.” states Mr. Gaetan Campeau, President & CEO of TelcoBridges Inc.

This new 1+1 offering ensures power redundancy, packet network redundancy as well as facility protection. Regardless of the product, whether it is the TMG800, TMG3200 or TMG7800 series, with Tmedia 1+1 you will ensure the availability of your system and the integrity of your media signalling and data transfer.

TelcoBridges is just beginning its promotion campaign to educate its partners and clients on this new product offering. Orders are already being taken for Tmedia 1+1 which are scheduled for delivery in Q3 of this year. Look for more details of TelcoBridges Tmedia 1+1 coming soon to TelcoBridges.com or contact your certified TelcoBridges partner. Other news to watch for out of TelcoBridges in the coming months will be its N+1 solution, scheduled to launch in Q1 2012.

About TelcoBridges

TelcoBridges designs, develops and manufactures carrier-grade telecommunications hardware and software. TelcoBridges brands include: Tmedia (VoIP gateways), Tdev (development platforms) and Tmonitor (real-time network monitoring). Its channel partners, which consist of valued-added reseller, system integrators, and solution developers, have deployed carrier-grade solutions in over 60 countries worldwide. As a recognised leader within the telecom industry, TelcoBridges was ranked as #175 in Deloitte's North American Fast 500 (2009), thanks to its revenue growth which exceeded 777% during the period spanning 2004-2008. TelcoBridges strives to continuously innovate, pushing the capacity of its products, providing the highest quality, highest-density in the lowest form factor possible.
