*Celesse*  
closing the gap

furnishing excellence™

## Celesse just may change the way you feel about sitting.

Finally, a chair that accommodates the way many of us sit when working – mid-way on the seat. This position is popular but leaves the lower spine unsupported, causing fatigue and discomfort. With Celesse, the chair does the work – not your back.

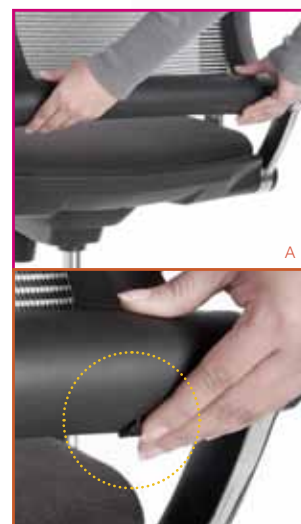

Celesse moves far forward, gently supporting your back as you work

Sitting halfway on the seat is common in workplaces everywhere, leaving a gap in back support

Celesse offers a ratchet-back mechanism that gives you the choice of a normal back position for when sitting fully on the seat, or the far forward position for when sitting mid-way on the chair.

To move the back to its inward position, simply hold on to any part of the back and pull forward to the desired position.

Two release buttons allow you to guide the chair back to its normal position (A). Moving the chair to its inward position is easily done by grabbing anywhere on the chair's back and pulling inward (B).

ADDITIONAL FEATURES

Armrest height adjustment

Synchronized tilt

Seat height adjustment

Armrest width adjustment
