

TouchInternational

Knowledgeable. Reliable. Trusted.

Touch Screens
Value-Added Solutions

Expertise

TouchInternational

Touch International is a world leader in touch screen manufacturing and display enhancement integration. We design and build high-tech value-added components that enable our customers to increase efficiency and communication, while reducing waste and power consumption. From the initial concept until the final assembly, our veteran team of engineers work closely with every customer to ensure each vision becomes a reality.

Combining extensive touch engineering expertise with built-in manufacturing knowledge, Touch International delivers industry leading, market proven solutions for military, medical, aerospace, industrial and point-of-sale applications.

By leveraging its seven manufacturing facilities world-wide, Touch International is able to maintain lower prices, industry-aggressive lead times and high-volume production without compromising our commitment to quality.

Touch Screens

With years of experience, continuous research and development, and sheer ingenuity, Touch International leads the industry in touch technology advances. Providing unparalleled accuracy and durability, our collection of standard and custom touch screens are designed to meet the exacting requirements and highest expectations of our users.

As a full service touch screen manufacturer, we offer touch panels in a multitude of sizes, shapes, thicknesses and materials. Whether your application requires a flexible film/film design, superior military strength, or custom cover glass printing, if you can dream it, we can build it.

Value-Added Solutions

From custom painted cover glass and touch screen manufacturing, to optical bonding and system integration, Touch International specializes in the value-added components that make your display a success.

Through the use of display enhancements and other value-added services, Touch International is able to satisfy strict industry regulations, conquer environmental challenges and ensure optimal performance and reliability.
