Square Channel outside dimensions: 39.4 x 0.63 x 0.5

Round Channel outside dim.: 39.4 x 0.7 x 0.6

Corner Channel outside dim.: 39.4 x 0.7 x 0.7

Aluminum Strip Light Channels protect and provide light diffusion for all our non-waterproof LED strip lights, including Flexible, Brighter, High Density, and Color-Changing RGB Strip Lights. Aluminum Strip Light Channels protect LED strip lights and provide a rigid, dustproof housing that can be mounted on a surface--like our LED light bars--or hung from a ceiling or other surface to replace a hanging light fixture. These channels are cuttable and can be mounted end to end to any total length. These sturdy but lightweight matte anodized aluminum channels can help create sleek, completely customized LED strip lighting installations.

Aluminum Light Strip Channels are available in three versions:

- the Square version is a square-shaped channel that mounts flush on a surface
- the Round version has a rounded shape that lets you adjust the angle of the channel

- the Corner version has a right-angled shape that allows for mounting in a corner so that light shines at a 45° angle

Each channel accommodates an Aluminum Strip Light Channel Cover (sold separately). Choose a frosted Strip Light Channel Cover to diffuse and soften the illumination from the LED strip light, or a clear Strip Light Channel Cover to shield the LED strip light from dust without diffusing the light. The Channel Cover is easy to install: just slide it into the existing slot in the Aluminum Strip Light Channel.

Aluminum Strip Light Channels can be installed on a flat horizontal or vertical surface with Aluminum Strip Light Channel Mounting Clips (sold separately). Channels that are surface-mounted can be sealed easily with Aluminum Strip Light Channel End Caps (sold separately). Or they can be sealed and hung from a ceiling using Aluminum Strip Light Channel Extended Hanger End Caps (sold separately).
