

Fusion Power Corporation

... a quick look

FPC Advantages:

- **FPC** has the **know how**, the **exclusive rights** to the required fusion energy technology and a **winning business proposition**.
- FPC power facilities can each have the **energy equivalent of a giant oil field** ... producing 20 to 100 GW of energy. (can be converted to 500,000 barrels of synthetic oil per day)
- FPC System can be **online in ten years**.
- FPC System can **costs less per kilowatt hour** than other generating sources.
- FPC System is better than wind, solar, coal, oil, natural gas, and biomass in that it is a **base load carbon free energy generator**.
- **FPC System is better than fission** in that fusion has not the potential for a run-away disaster, little or no radio-active waste disposal problem and does not produce bomb making materials.
- FPC System is **better than laser fusion, magnetic containment fusion, z pinch** and the rest in that it is not dependent upon the discovery of a magic material to control the radiation generated and it has the energy to complete the fusion process.
- FPC System has the **lowest environmental impact** of any equivalent energy source.
