The Quickest and Most Cost-Effective Way to Add E-Signing to Your Applications

Keep your business processes electronic by adding secure, powerful electronic signature capabilities to your web portal or e-business applications using e-SignLive™. The Integration Edition of this cloud service enables you to integrate e-signing functionality, quickly and easily, using standard Web services. What's more, you can tailor the graphical user interface to deliver the most transparent and seamless user experience.

e-SignLive uses standard Web services, such as REST and JSON, for the programmatic integration of e-signing capabilities with virtually any 3rd party or custom software system. You can then tailor the GUI to match your organization's branded website and application; easily create and manage an e-SignRoom™; and manipulate the documents to be signed and manage signers and their signatures.

An ideal solution for e-signing non-disclosure agreements, sales contracts, real estate documents, insurance and loan applications, supplier agreements, employee on-boarding and HR documents, and more.

Benefits of e-Signing

Faster, More Convenient Customer Service: Customers can instantly review and sign documents electronically from the convenience of their home or office 24 / 7.

Shorter Processing Cycles: The time to complete transactions and business processes are reduced from weeks, days and hours down to minutes.

Decreased Document Handling Costs: Eliminates paper-related costs: printing, paper, courier, verification / QA, scanning, data re-keying, etc..

Fewer Processing Errors: Prevents document packages to be returned if they are missing signatures, data or documents.

Stronger Legal and Compliance Position: Captures more comprehensive and persuasive evidence than is possible with pen and paper.

Increased Operational Efficiency: Reduces manual processing of documents, enabling staff to spend more time servicing customers and focus on their core responsibilities.

Web Services Support:

- REST
- JSON

Document Format Support:

- Microsoft Word (DOC)
- Adobe Acrobat (PDF)
- IBM Symphony Documents (ODT)
- OpenOffice Writer (ODT)
