FIELDING
SYSTEMS

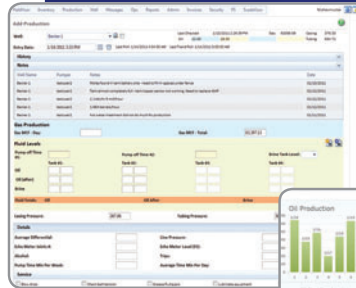

Do you know what
your wells
are doing right now?

FieldVisor

- ☀ Manages wells, compressors, and equipment
- ☀ Allows treatments, services, and work orders to be assigned to specific users
- ☀ Ensures that personnel only have access to the data required for their job
- ☀ Improves operational efficiency and reduces errors with data entry validation
- ☀ Provides real-time access to all data captured by field personnel
- ☀ Tracks company assets equipment with GPS

FieldVisor Production Data Capture

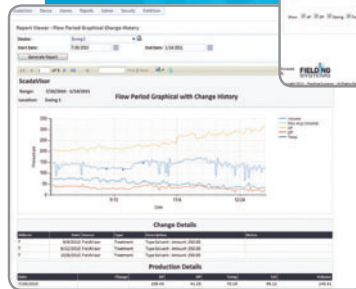

FieldVisor Dashboard

ScadaVisor

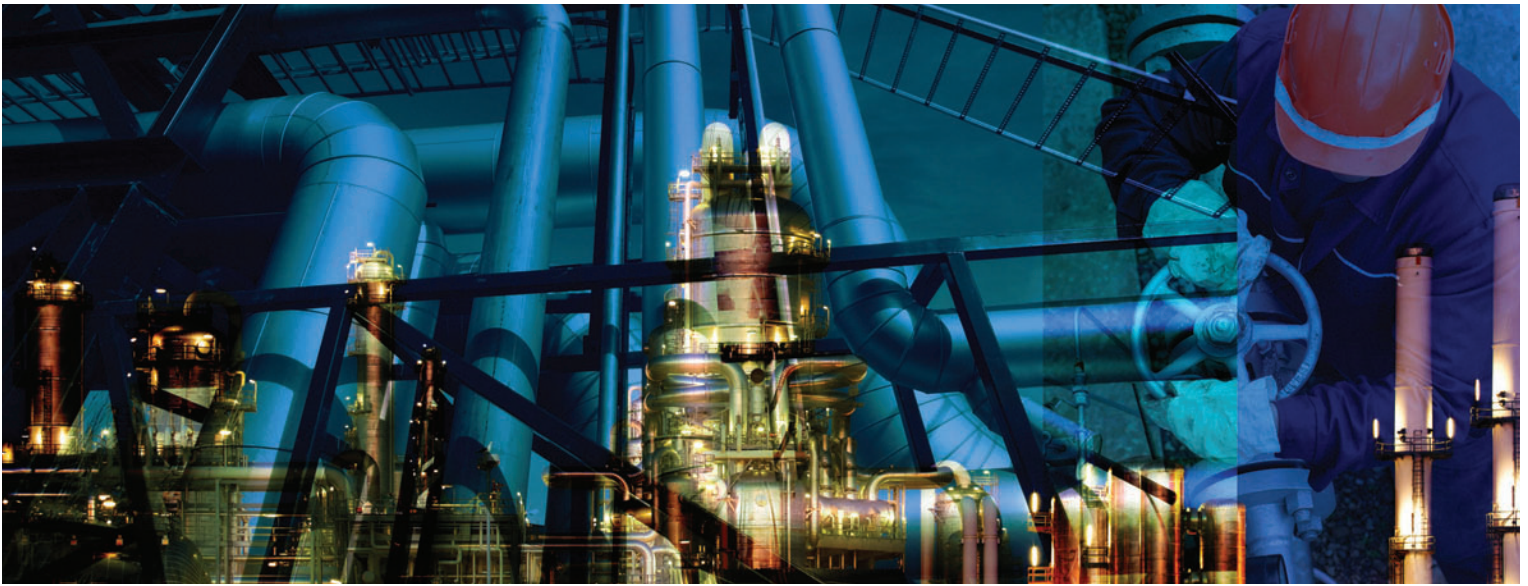

- ☀ Supports leading flow computers, artificial lift devices, pump off controllers, tanks level sensors, and other field devices
- ☀ Reports real-time and historic production data
- ☀ Allows alarms to be defined on any data collected or defined by trend-based alarms
- ☀ Includes custom features such as telemetry device management, alarms and notifications, and specialized reports

ScadaVisor Dynamic Production Graphs

ScadaVisor Production Change History

Production **Simplified** Production **Maximized**

We know **oil and gas**

Chief architect Shawn Cutter is highly experienced in the software industry. What makes him unique from other IT professionals is his hands-on experience in the day-to-day workings of oil and gas production. He cut his teeth in his family's oil business and understands exactly what producers need to fulfill their safety obligations to landowners and the community. The innovative software that he and his team have developed will both maximize well output and simplify office procedures to enhance production management.

Technology: **Done Right**

Our software can be customized to meet the specific needs of your operation. Features can be added or disabled to enhance usability and performance. These include scheduled reports to ease monthly production and distribution accounting, calculation of the frequency and effect of your regular treatments, and even providing oversight by monitoring the exact location of your pumps at all times.

Nothing to install

The Fielding Systems platform is a web-based hosted platform meaning it is ready to use without the expense of special hardware or server equipment. You have access to your wells anytime and anywhere in the world.

Advanced Reporting and Analysis

- ⊗ Reduce downtime
- ⊗ Detect unexpected production drops
- ⊗ Verify treatment effectiveness
- ⊗ Monitor pumper productivity
- ⊗ Analyze production curves
- ⊗ Schedule reports for automated delivery

FieldVisor Production Summary Monthly KPI														
Current Month						Previous Month						Difference		
Total Oil:	14,276.68					Total Oil:	12,199.50					17.84%		
Total Inflow:	6,976.17					Total Inflow:	2,789.29					150.73%		
Shipments:	119					Shipments:	137					-13.14%		
Shipped Oil:	11,354.68					Shipped Oil:	12,739.20					-9.31%		
Total Gas:	72,940.47					Total Gas:	60,663.25					20.24%		

Oil Summary Details

Monthly Gas Summary Report

Software for the Modern Producer

Fielding Systems allows you to have *the most sophisticated oil and gas well monitoring technology* at your fingertips 24-hours a day anywhere internet access is available.

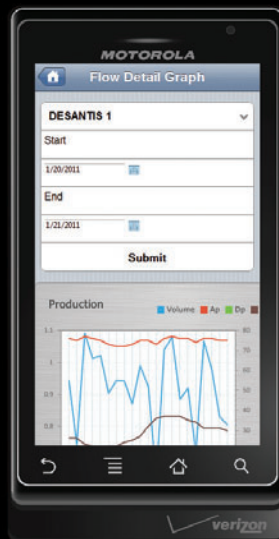

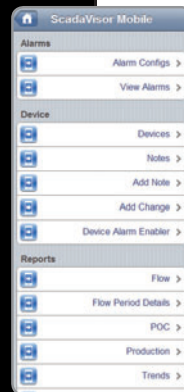

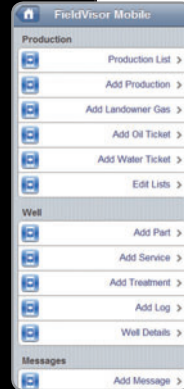

Armed with the FieldVisor application, your pumpers will *keep more accurate records* of their work in the field than with the old paper-and-pencil method, while you keep closer tabs on your assets and maximize the performance of your wells.

Through the use of *automated notifications* you can avoid even the slightest problems before they become fodder for the evening news.

Most importantly, by reducing well downtime and improving efficiency you will achieve what all producers want: *Increased production.*

Technology that was previously affordable to only the biggest and wealthiest players in the industry is now *within your reach!*

Contact Fielding Systems today to schedule a *free, customized demonstration.*
