

## FOR APPLE MOBILE DEVICES

Now on the go with the Apple iPad, iPhone, and iPod touch!

IF YOU'RE LOOKING to speed service by taking orders at the table and to give managers a way to run operations from anywhere in your restaurant, bar, or hotel, then Squirrel Professional for Apple mobile devices is for you.

Squirrel started a revolution in the hospitality industry by introducing the first restaurant POS system with touchscreen technology 27 years ago. We have deep roots in the POS industry, expertise with touchscreens, and a commitment to innovation.

You can rely on us to provide the right solution for you and your Apple devices!

### THE FULL POS EXPERIENCE

- Want to do more than just take orders?

With Squirrel Professional, your Apple device is more than just an order taking system. In fact, you get the complete Squirrel Professional experience since our full point of sale software (and all its great features!) runs seamlessly on your iPad, iPhone, or iPod touch. Not only are you able to take orders, but you can also edit menus on the fly, manage promotions, and even send communications to your staff using our handy messaging system – all on your Apple device!

### MIX AND MATCH HARDWARE

- Need different hardware for different departments?

What works in one area of your business may not work in another, so having the flexibility to mix and match your hardware is important. For example, servers in your dining or patio area will love the convenience and accuracy of using the iPad, iPhone, or iPod touch to take orders at the table. However, your bartender may find that a wall-mounted terminal is more appropriate for the potential spills and high traffic in your bar. With Squirrel Professional, you can use both! And since the software looks and operates the same regardless of the hardware you're using, no extra training is required.

### PCI-VALIDATED PAYMENT APPLICATION

- Credit card security top of mind?

Squirrel Professional is PCI-validated to the highest level, PA-DSS (Payment Application Data Security Standard), which is one of the requirements you need to consider when it comes to achieving PCI DSS compliance. Whether you use Squirrel Professional on a stationary workstation or a mobile Apple device, you can rest easy knowing that you are meeting this part of your overall PCI obligations!

Apple, iPad, iPhone, and iPod touch are registered trademarks of Apple Inc., registered in the US and other countries.
