Top 10 Reasons Why Rational and CloudOne are Better Together

1) Adaptability

OnCloudOne, all of our server space is on-demand, and we don't make you pay extra for the privilege of adapting your environment dynamically to your needs each month. Your Rational datacenter onCloudOne changes with your needs, when you need it, without the headaches and overhead of maintaining it in-house.

2) Easy Integration

OnCloudOne, we know you need to integrate your development tools into directories, databases and file storage centers, so we design clouds that integrate seamlessly into your existing environment. It's transparent and easy.

3) Security You Can Count On

We pride ourselves on keeping your information private and secure, and are audited annually by outside consultants. We use an isolated, non-shared island architecture, as well as by both physical and logical access restrictions. And your sessions are secured and encrytped from the desktop to the server through VPN.

4) No Complicated Server Choices

We don't confuse you with 100 different configuration choices. We work with you to determine what you need to run your IBM software in a supported, top-performing way. We do this for you at no charge, and give you the optimal OS and server environment for your exact software configuration every time.

CloudOne

5) No Setup Charge

Whether you just want to try us out, pilot some new software, or add a test environment for a month or two, we make it easy. There are never any setup charges. Not onCloudOne.

6) No Extra Data Transfer Charges

When you use IBM Software in your Virtual Private Cloud at CloudOne, there's no surprises on network bandwidth: we include network capacity most commonly needed in your service fee, and if you exceed that amount, we state up-front how much it will cost.

7) No Confusing Storage Calculations

We include the storage you need for your tools, and back it up and restore it on schedule or on command. If you need more, no surprises: we price it up-front.

8) Quick Product Setup

We can take care of installation for you, and work with IBM and your team to get it done fast. We offer true software-as-a-service, not some complicated image library system.

9) User ID Support

Need to add/remove users from your environment? Consider it done – CloudOne's support team can take care of it for you online, e-mail or on the phone.

10) Patches and Upgrades

Want patches and upgrades automatically applied to your software products? OnCloudOne you can always be up-to-date.
