

World's First Next Generation Fully-Functional VSAT Hub for under \$50,000

Montreal, Canada, July 20, 2011 —Advantech Wireless Inc., a Canadian-based manufacturer of Satellite, RF Equipment and Microwave Systems today announced the launch of its newest generation of VSAT Hubs – the Discovery Series. The Discovery Series Hub is the perfect starter system offering better value for your dollar than any other manufacturer. The Discovery Series is a two-way, open standard (DVB-RCS), broadband satellite access system and includes a fully functional hub with 4 inbound carriers, scalable as your needs grow, all for under \$50,000.

Overwhelming customer demand has driven us to create a new series of Hubs for each market. The new Discovery series allows small to medium private satellite networks, commercial enterprises or government to get started today at the lowest possible cost. As you grow, your investment remains intact; the solution will scale with your needs.

- Lowest Entry Level Price: Starting at less than \$50,000 for a fully-functional Hub
- Unmatched Features: 4 inbound carriers (Upgradeable to 32 carriers at a low incremental cost)
- Maximum Flexibility: Economically Scalable
- Up to 18 Mbps Throughput
- Support for up to 500 terminals
- Minimize CAPEX and OPEX, instantly improve ROI
- DVB-RCS, DVB-S/S2
- Includes an Advantech Wireless Layer 3 Router!
- Advanced options available

Advantech Wireless has removed all barriers to entry and has configured many systems for quick turnaround. For example: for those looking for a turnkey package Advantech Wireless can offer a complete fully functional Hub along with 50 Remote Terminals (our S4120) for less than \$100,000. This is an amazing value that only Advantech Wireless can supply.

About Advantech Wireless

Advantech Wireless, an ISO 9001: 2008 certified corporation, is shaping the world with leading-edge wireless broadband communications. Since 1988, Advantech Wireless manufactures and deploys networking solutions for broadband connectivity, broadcast solutions and backhaul requirements using satellite and terrestrial wireless communications.
