For Immediate Release:

New 7Notes App Re-defines Text Writing on iPhone & iPad

7notes: Advanced Handwriting app for iPhone and iPad by 7knowledge Corporation.

SAN FRANCISCO, August 4, 2011 7knowledge Corporation, a wholly owned subsidiary of MetaMoji Corporation, has released it's new iPhone/iPad app called 7notes with advanced handwriting recognition technology and is now available for download in Apple App store globally. 7Notes brings its advanced handwriting recognition technology to the text writing experience for both the iPhone and iPad.

7notes is now available in two editions; a free download that includes basic handwriting & keyboard functionality and can easily learn the benefits of switching between modes of input and a Premium edition, users get full access to advanced handwriting recognition including a predictive engine.

7notes allows the user to easily switch between handwriting and keyboard input so a user can take notes in business meetings faster and easier, personalize their documents and social texts with cursive content and share them with their colleagues and friends.

The 7notes Premium edition has built-in handwriting recognition that allows the user to convert their cursive writing into digital text anytime they want. 7notes allows the user to sketch ideas, organize thoughts and share their documents with their colleagues and friends.

7notes Premium represents a major advancement from Apple's current handwriting recognition technology for the iPhone and iPad as it includes a state-of-the-art proprietary handwriting recognition technology that includes predictive recognition technology for faster more accurate recognition of handwriting.

7notes allows users to take notes on the go with their fingers or a pen for the iPad. The system automatically recognizes handwriting and records it. Users can save them into different document formats as well as connect to Dropbox and Evernote. Standard features include simple note taking features, built-in Spell Checker, autocorrect and auto-completion and PDF Document Creation.

Handwritten notes and symbols can be entered directly onto digitally typed text documents. 7notes allows the user to set styles of the user's writing including weight of stoke, size, color, etc. Users can switch between Handwriting and Keyboard entry with a single touch.

"This App allows humans to communicate and express themselves in the digital world more naturally" says Kaz Ukigawa, President / CEO of 7knowledge. "The mobile landscape has change the way we interact with these devices and these devices must encourage a natural human interaction element."

This app has been released on August 4th on iTunes.
