Web Conferencing Software for Online Meetings and Live Webinars for Windows, Mac

250
ISL Groop is a web conferencing software for online meetings, live webinars, e-learning and web collaboration. Invite participants by email, share content, and use audio and video. Meet online with anyone from the office next door or another country.

450
ISL Groop is a web conferencing software for online meetings, live webinars, e-learning and web collaboration. You can meet online with anyone from the office next door, or another country regardless firewalls or the operating system (Windows, Mac, Linux). The meeting attendees communicate via the integrated VoIP and video, and create slides in an instant by importing their PowerPoint file or sharing live content like a desktop or an application.
ISL Groop is a web conferencing software tool for online meetings, live webinars, e-learning and web collaboration. You can meet online with anyone from the office next door, or another country regardless firewalls or the operating system (Windows, Mac, Linux). The meeting attendees communicate via the integrated VoIP and video, and create slides in an instant by importing their PowerPoint file or sharing live content like a desktop or an application.

2000
ISL Groop is a web conferencing software for online meetings, live webinars, e-learning and web collaboration. Invite participants over the Internet, share content, and use audio (VoIP) and video conferencing. Webinars and online meetings can save your organization the unnecessary traveling time and costs normally spent on traditional meetings. Meet online instead and have a face-to-face interaction with anyone from the office next door or another country.

Secure ISL Groop meetings are started on demand without a computer setup and enable interactive presentations and collaboration in real time. The meeting attendees create slides in an instant by importing their existing PowerPoint file or sharing live content like a desktop or an application. Both presenters and participants can annotate and comment on slides as they do on a whiteboard. They can communicate via the integrated VoIP and video, and use the meeting's public or private text chat.

Security
ISL Groop meetings use maximum security available. All data connections are encrypted with SSL using symmetric 256-bit keys. X.509 certificates are used to guarantee the authenticity of transmission.

Presentation Content

In addition to sharing live content, slides can easily be created by importing an existing PowerPoint file, inserting the clipboard content, clipping your screen, or making a snapshot from a shared live content stream.

Webinar
ISL Groop webinar is designed for delivering content to a larger audience. The host has all the rights, while other participants can only communicate with the host by chat.

Other features include:
