FibreSpan announces media sector customer wins as it expands its London network

London, United Kingdom – 2 September 2011: FibreSpan, a national network carrier specialising in dedicated dark fibre and ultra-high bandwidth network services, has announced recent significant wins in the media and entertainment sector, and looks to build on this momentum in the coming months as it continues to extend its West End network.

FibreSpan's extensive London network currently offers over 250km of fibre with a strong concentration in the West End area, connecting hundreds of media and entertainment customers to meet their need for fast and secure data transfer. The firm is already implementing its plans to extend services, reach and access to additional customer locations and to provide enhanced connectivity to meet the growing demands of this sector.

This investment demonstrates the company's commitment to its customer base - especially those who are demanding a high-bandwidth service with high levels of security, reliability and cost-efficiency.

Adam Wheeler, Sales Manager at FibreSpan, said: "This is an exciting time for FibreSpan and it is impressive to see our network coverage and client base continue to expand in a market where we have built considerable strength over the years. We will continue to invest in our network to meet the secure high-speed connectivity needs of this important sector."

FibreSpan specialises in providing private point-to-point dark fibre with unlimited bandwidth at a fixed price, as well as dedicated uninterrupted fixed bandwidth Ethernet connectivity up to 10Gbps. Customers benefit from secure high-speed networking for site-to-site, data centre and internet connectivity.

By combining FibreSpan's installed network with the ability to construct its own network to client locations, FibreSpan has the unique capability to deliver high performance network services directly to the customer's door.

About FibreSpan

FibreSpan is a network carrier specialising in private ultra-high bandwidth ‘fibre to the door’ connectivity for the sole purpose of transporting critical business traffic as cost-effectively as possible. Our customers come from a range of industry sectors, but all share the same need for point-to-point high bandwidth network connectivity to manage uninterrupted communications between multiple locations. They have to balance ever increasing bandwidth requirements with mounting pressure to contain infrastructure costs. Founded in 2001, FibreSpan has a national telecommunication license (with code powers) and over the years has been increasingly recognised as one of the country’s leading providers of private fibre networks.
