# Bangert Computer Systems Hosts Informative Webcast Outlining New Features in Sage Master Builder Version 17

**Sage Business Partner, Bangert Computer Systems, Details Ways Sage Master Builder Helps Build Business Success.**

**Kansas City, MO**—September 8, 2011—Bangert Computer Systems, a premier provider of Sage Construction and Real Estate (CRE) Solutions serving the Midwest, today announced it is offering an informative webcast outlining the new features included in Version 17 of Sage Master Builder. The webcast is open to all and can be viewed on YouTube or on LinkedIn. Bangert Computer Systems is the top Sage CRE solutions provider in the Midwest and among the top three in the nation.

Sage Master Builder integrates estimating, production, scheduling, accounting, service management, and analysis in one convenient and easy-to-access system. For construction companies and service/specialty contractors outgrowing off-the-shelf accounting software, it is the ideal solution to get the information they need, when they need it and in the right format. The latest version focuses on three key areas, including: improving service operations, enhancing decision-making and streamlining administrative tasks.

"Version 17 represents a significant step forward in usability," said Khensa Bangert, Vice President of Marketing and Growth at Bangert Computer Systems. "It combines practical features such as a year-end close wizard and more than 70 built-in human resources forms, along with strategic new functionality that makes business data more visible and accessible."

Of particular interest to many businesses will be the Customizable User Dashboards that provide specific business metrics owners need for a holistic view of their business. In addition, Custom Alerts can be configured to notify users of business milestones and events via email or the Dashboard. Other new features include the WH-347 Certified Report and select field encryption for security (e.g. Company Federal and State Tax IDs, Employee Bank Account Numbers, Employee SSN, Vendor Tax ID, and Client Credit Card.)

"By providing construction-specific tools and functionality, Sage Master Builder supports and enhances the success of our clients," Ms. Bangert noted. "One of our Sage Master Builder clients recently won the national AWCI Excellence in Construction Quality Award. Their ability to effectively and efficiently manage their clients and projects was instrumental in that win."

At the conclusion of the webcast, there is an opportunity for viewers to post their questions which will be personally answered by consultants from Bangert Computer Systems. For questions or to schedule a personalized demonstration of Sage Master Builder, contact Brett Hodson at (319) 752-5484 or at Bretthb@bangertcomputer.com.
