FIELD EAGLE

REDUCE INSPECTION TIMES
IMPROVE ACCURACY
MAKE BETTER DECISIONS

Field Eagle optimizes inspection efficiency and accuracy by eliminating paper-based data collection and double data entry. Reduced data collection and processing times mean lower inspection and administration costs. More effective asset tracking and reporting allows you to identify and proactively address potential problems, which in turn helps to mitigate risk and costly repairs. In short, Field Eagle saves you time, money, and stress.

FIELD EAGLE INSPECTIONS

While easy to learn and use, Field Eagle is flexible and powerful enough to handle even the most complex inspection requirements. A few features include:

- ✓ Track each facility by configurable attributes – year built, location, number of floors, etc.

- ✓ Track an unlimited number of inspection items and customize attributes and questions for each item. Notes, images, barcodes and serial numbers can also be captured for each item

- ✓ Create an unlimited number of templates of items and questions that can be used or easily modified for similar facilities

- ✓ Quickly retrieve previous inspection information for comparison and corrective action purposes

- ✓ Create an unlimited number of standards and protocols, and attach supporting documents to each standard and protocol

REPORTING

Due to the amount of data Field Eagle stores, the reports that can be created are almost endless. A set of standard reports is provided within the application, and Konverge works with your specific requirements to ensure all of your reporting functionality is met.

WORK ORDERS

Field Eagle can produce a list of all items that require attention, and enable you to export a list of Work Orders that can be imported into most Maintenance Management systems. Konverge, as integration and database experts, can work within your current environment to ensure easy integration.

HARDWARE

Field Eagle runs on devices supporting the Microsoft Windows operating system, such as Motion Computing's rugged F5v (pictured) and CL900 Tablet PCs. Designed for field service use, Motion Computing's Tablet PCs are shock, scratch, dust and water-resistant. Standard and optional features include a camera, barcode scanner, RFID reader, Wi-Fi, Bluetooth® and pen-enabled touch screen for easy note taking and signature sign-offs.
