

LaunchWorks LaunchPortal

The LaunchWorks LaunchPortal™ for Business Objects® provides an turnkey secure external reporting portal. Our software easily integrates with your Business Objects implementation to provide a simplified view of reports and dashboards to external customers, partners, and vendors. We satisfy your compliance needs by providing granular user access controls, comprehensive access logging, and real time alerting.

LaunchPortal provides your users with a web based user interface. Your users may access this interface from a multitude of applications and devices including a standard web browser, iPad/iPhone®, Blackberry®, or Android® based mobile phone. If you would like to use your own reporting interface, then LaunchPortal provides a robust API for integration into your reporting applications.

Once logged in, your users have access to dashboards and reports you choose to securely share with them. In addition to viewing online, your users will have the ability to export your dashboards and reports to a multitude of file formats that include CSV, PDF, JPEG, Microsoft Power Point® and Microsoft Excel®.

LaunchWorks LaunchPortal Key Features

- Leverages existing Business Objects authentication so there is no need for separate security
- Provides stock and customizable screens for report presentation so you don't have to do develop
- Provides a highly optimized report processor so you can offload the workload from your systems
- Contains both a web portal and an API so you can choose how you want to serve your reports
- Integrates with Crystal Reports®, Webi®, Microsoft SharePoint® and Salesforce.com®
- Enables access controls on at user, group or global level
- Enables automated scheduling and delivery of reports to your applications

LaunchWorks ReadyPortal is deployed on your internal servers or hosted in the LaunchWorks cloud

OS: UNIX®, Windows®, Linux®
