2000

ISL Light is a fast, simple and secure remote desktop control software for instant desktop sharing and file transfer. It works on Windows, Mac, Linux, and Windows Mobile, and doesn't require installations or firewall configurations. With a simple session start, an ISL Light user can offer remote assistance to anyone connected to the Internet. ISL Light includes all standard tools for remote desktop control: desktop and application sharing, file transfer, AES 256-bit encryption, whiteboards, remote printing, text chat, audio (VoIP) and video conference, and session recording.

All in one

ISL Light is a part of the ISL Online product suite, which means that you get tools for remote desktop support, access, live chat, and online meetings in one license.

Automatic Setup

ISL Light executable automatically launches, installs, and configures itself. Does not require a firewall configuration.

Maximum Security

ISL Light uses industry-standard (SSL) symmetrical AES 256-bit end-to-end encryption and Verisign Certificate.

Desktop Sharing

Share your desktop with a client or view and control your client's desktop or an application.

File Transfer

Quickly transfer files and folders between computers in both directions.

Reboot & Reconnect

Regain connection after rebooting the remote computer, switching user, or logging off.

Whiteboard

Use the remote desktop as a whiteboard: draw a pointer and use a red marker.

Audio & Video, Chat

Use secure chat, VoIP and live video communication between the operator and the client.

Remote Printing

Share a printer and print a local document on a remote client's printer or vice versa.

User Management

Assign an administrator to manage ISL Light services in a company: add operators to admin account, give them individual rights, and monitor their activities.

Optimal Performance

Cloud-based communication technology assures global client support with nearly 100% service up-time, fault tolerance, and automatic session re-connection.

PAD file – ISL AlwaysOn: Remote Access

45

Remote access and desktop control software.

80

Remote access software and desktop control of any computer over the Internet.

250

ISL AlwaysOn is a simple remote access software enabling efficient work from anywhere. Access and control a remote computer, synchronize files, and use its installed applications. Access your home PC or create a network of workstations and servers.

450

ISL AlwaysOn is a simple remote access software enabling efficient work from anywhere. Once granted, the computer can be accessed over the Internet from any Web browser using Windows, Mac, Linux. Simply connect to your home or office PC anytime you need it or easily maintain remote servers from one location. Features include viewing and controlling desktop, file synchronization, printing remote files, and restoring a connection after rebooting.

2000

ISL AlwaysOn is a simple remote access software enabling efficient work from anywhere. Once granted, the computer can be accessed from any Web browser using Windows, Mac, and Linux. You can control remote computers within a local area network or over the Internet. With ISL AlwaysOn you can simply connect to your home or office PC anytime you need it, easily maintain remote servers from one location, or support your employees and clients remotely.

ISL AlwaysOn includes all standard tools for remote desktop access: view and control desktop, synchronize files, print remote files, and restore a connection after rebooting.

Automatic Setup

ISL AlwaysOn executable automatically launches, installs, and configures itself.

Firewall Friendly

ISL AlwaysOn works with your existing firewall and does not require a special configuration.

Web Access

To access remotely, all you need is an Internet-connected computer. You log into your web account, click 'connect', and there you are.

Maximum Security

ISL AlwaysOn is secured at multiple layers. First, each remote computer has installed a customized program with its own digitally signed executable file for identification. Second, all data connections are AES 256-bit end-to-end encrypted. And finally, a personal password additionally protects host computers from unauthorized access.

Desktop Control

View the remote PC's desktop and control the keyboard and mouse.

Reboot & Reconnect

Regain connection after rebooting the remote computer, switching user, or logging off.

File Transfer

Quickly transfer or synchronize files and folders between the local and remote computers.

Access History

Monitor the ISL AlwaysOn's activities by tracking the history of accesses to the host computer.

Optimal Performance

Cloud-based communication technology assures global client support with nearly 100% service up-time, fault tolerance, and automatic session re-connection.

PAD file – ISL Pronto: Live Chat and Enterprise Instant Messenger

45

Live chat software for online sales & support

80

Live chat software to facilitate online sales and efficient customer support.

250

ISL Pronto is live chat software for your website, enabling you to respond to sales inquiries and support requests by your visitors online. You can text chat with your website visitors, use VoIP and video conference, and switch on desktop sharing.

450

ISL Pronto is live chat software for your website, enabling you to respond to sales inquiries and support requests by your visitors online or use it as Enterprise Instant Messaging. The service can be upgraded from a simple text chat to a rich media collaboration via voice, video, and desktop sharing. The connection can be established seamlessly through any firewall and works on all major operating systems such as Windows, Mac and Linux.

2000

ISL Pronto is live chat software for your website, enabling you to respond to sales inquiries and support requests by your visitors online. The connection between your website visitors and your personnel can be established seamlessly through any firewall and works on Windows, Mac and Linux.

Quickly embedded on your website, ISL Pronto will create an on-demand link with your visitors. They will simply click the 'Live Chat' button to instantly get in contact with your personnel. The session starts with text chat and can be advanced to audio (VoIP) communication, video exchange, desktop sharing, file sharing and much more. Through ISL Pronto's real interaction you can provide decision-based information for people browsing your website, increase sales by converting more website visitors to customers, improve customer support by solving their problem immediately via desktop sharing. Much more, ISL Pronto is also an Enterprise Instant Messaging solution. It also enables real-time and efficient communication between your employees or business partners.

Customizable Chat Window

Insert your company logo, operator images, etc. And customize the pre-chat form to acquire additional information on the visitor prior to a chat session.

Chat Transfer

Transfer chats from one operator to another in real time.

Canned Responses

Save your replies by category and keywords as you chat and thus build a knowledge base of possible answers for future chats.

File Transfer

Quickly transfer files to the visitor's computer by simply dragging and dropping them to the user interface.

Chat Transcript

Review a transcript of any chat that takes place on your site, online 24 hours a day.

Secure Chat

ISL Pronto sessions are encrypted with SSL of 1024-bit RSA and 256-bit end-to-end AES encryption.

Optimal Performance

Communication is optimized for low latency and bandwidth requirements, whereas cloud-based communication technology assures global client support.

250

ISL Groop is a web conferencing software for online meetings, live webinars, e-learning and web collaboration. Invite participants by email, share content, and use audio and video. Meet online with anyone from the office next door or another country.

450

ISL Groop is a web conferencing software for online meetings, live webinars, e-learning and web collaboration. You can meet online with anyone from the office next door, or another country regardless firewalls or the operating system (Windows, Mac, Linux). The meeting attendees communicate via the integrated VoIP and video, and create slides in an instant by importing their PowerPoint file or sharing live content like a desktop or an application.

ISL Groop is a web conferencing software tool for online meetings, live webinars, e-learning and web collaboration. You can meet online with anyone from the office next door, or another country regardless firewalls or the operating system (Windows, Mac, Linux). The meeting attendees communicate via the integrated VoIP and video, and create slides in an instant by importing their PowerPoint file or sharing live content like a desktop or an application.

2000

ISL Groop is a web conferencing software for online meetings, live webinars, e-learning and web collaboration. Invite participants over the Internet, share content, and use audio (VoIP) and video conferencing. Webinars and online meetings can save your organization the unnecessary traveling time and costs normally spent on traditional meetings. Meet online instead and have a face-to-face interaction with anyone from the office next door or another country.

Secure ISL Groop meetings are started on demand without a computer setup and enable interactive presentations and collaboration in real time. The meeting attendees create slides in an instant by importing their existing PowerPoint file or sharing live content like a desktop or an application. Both presenters and participants can annotate and comment on slides as they do on a whiteboard. They can communicate via the integrated VoIP and video, and use the meeting's public or private text chat.

Security

ISL Groop meetings use maximum security available. All data connections are encrypted with SSL using symmetric 256-bit keys. X.509 certificates are used to guarantee the authenticity of transmission.

Presentation Content

In addition to sharing live content, slides can easily be created by importing an existing PowerPoint file, inserting the clipboard content, clipping your screen, or making a snapshot from a shared live content stream.

Webinar

ISL Groop webinar is designed for delivering content to a larger audience. The host has all the rights, while other participants can only communicate with the host by chat.

Other features include:

- Easy setup
- Integrated Audio and Video
- Share Any Application or Desktop
- Automatic sound and video detection
- Import/export presentation
- Firewall friendly
- File transfer
- Instant invitation
- Full screen view
- Annotations
- Public or private chat
- Work alone mode
- Raising hand
- Presentation layouts
