

POS Intelligence

Precise Reporting sent directly to your phone, email and desktop

1. Customize

Use only the data you need and customize the dashboard view. Focus on only the most important aspects of the operation.

2. Compute

Query data from as many locations as necessary. Utilize the metrics tab to run above store reports and table turn times, and more!

3. Conduct

Run the operations and pass on what you know through business intelligence and the dashboard.

Did you know?

The average restaurant can see an average of 3-5% in savings through informed purchasing.

What could POS Intelligence do for you? How about redefining your menu to match optimal profitability and recommend orders based on those recipes.

Business Intelligence for Making Smart Decisions

Effective restaurant management requires smart decisions, and the key to deciding the best course of action is intelligent, accurate information. To provide you with this information, we measure every bit of data collected throughout your organization and POS system. We then provide clearer views into that data through our innovative tools.

With our drill down reporting system, you start with a general summary of your entire organization, and can then move through levels of detail, all the way to the check level.

Best of all, report subscriptions allow you to save a customized report as a subscription, and it is automatically emailed to you, your managers, or groups within your organization, at the intervals you choose. No log-in is required, and the report is even readable on most mobile devices.

3 Reasons to choose a solution:

- Quick ROI by reducing waste
- Increases value per menu item
- Easily manage vendor relationships
