

## DataON Provides Enterprise Storage Solutions Based on NexentaStor

DataON to Demo DNS & DMS Products at OpenStorage Summit 2011

DataON Storage, the leading supplier of enterprise-class storage enclosures, will be demonstrating its new released 6G SAS disk shelves providing high-availability, high-density, and scalability features and built in Nexenta Certified Storage Solutions Partner at this year's OpenStorage Summit, held in San Jose on October 26-27.

With the storage industry landscape changing rapidly, DataON has seized the opportunity to create industry standard disk shelf products purposely designed for the OpenStorage community. The DataON NX-2260 Unified Storage System, powered by NexentaStor, is a NAS appliance that incorporates true enterprise features without incurring the customarily exorbitant prices of proprietary hardware and software. By leveraging the power of NexentaStor, DataON Enterprise Storage products provide many features previously found only with expensive proprietary solutions—and many innovative features entirely unique to ZFS.

"We see the market for OpenStorage and ZFS products exploding. By partnering with Nexenta, we are in the right market at the right time," says William Huang VP – Sales, DataON Storage. "Today, companies are evaluating projects for cloud, for virtualization, for VDI, and looking for alternative storage solutions that go beyond legacy solutions. We have successfully assisted numerous customer deployments of enterprise-class storage, and we are committed to giving our customers the best product at the best price."

The OpenStorage Summit 2011 features storage experts leading in-depth sessions on key storage technologies, including virtualization, high-availability, and cloud technology. As a sponsor of this year's event, DataON Storage will be demonstrating its products including DNS-1660 4U 60-bay 3.5" and 2U 24-bay 2.5" ultra-density disk shelves and its flagship DNS-1600 4U 24-bay the high-density and the bestselling disk shelf. All of these models have been certified by NexentaStor 3.1 and DataON DSM 3.1 Disk Shelf Management Software for NexentaStor 3.1

"Today's expanding OpenStorage ecosystem has countless companies building storage solutions on top on NexentaStor," states Evan Powell, CEO, Nexenta Systems. "The collaborative work between companies such as DataON and Nexenta only add value to the end user. Anyone attending this year's event can see that OpenStorage technology is creating a more level playing field where technology innovation and price to performance ratios will drive business."

As a member of the OpenStorage community, DataON products has successfully completed both the rigorous Nexenta Certification testing process and NexentaStor HA Cluster Solution Certification testing program thus providing end users with the confidence and ability to tackle mission critical applications. Along with these qualifications and by providing proven solutions with superior performance, quality, scalability and enterprise-class storage monitoring, DataON has increased its customer count by **200%** and its revenue growth by over 100% in 2011.

Certified storage solutions by DataON include multi-level data protection, inherent I/O virtualization, an easy and intuitive interface with integrated search, and reliable high-performance storage. These innovative features constitute proven solutions that are evident in DataON customers such as Washburn University and Delano Regional Medical Center. These satisfied customers have been asked to tell their success stories at this year's OpenStorage Summit.

### About DataON:

DataON™ Storage is the leading provider of Enterprise-Class Storage Enclosures with 6G/b SAS technology delivering high availability, scalability, flexibility and high performance storage solutions. Since 2008, DataON Storage offers disk shelf products including; 4U 60-bay 3.5" ultra-dense JBOD, 4U 24-bay 3.5" best-of-breed and 2U 24-bay 2.5" high-density, high performance and green storage disk shelf. In addition to the SAS JBODs DataON also developed its disk shelf management software well known as DSM 3.x specifically for NexentaStor™, OpenSolaris and Solaris OS. More information about DataON call 1.877.512.0432 or visit [www.DataONStorage.com](http://www.DataONStorage.com).
