IP Ethernet Network

eBUS™ SDK

Pleora's comprehensive application development toolkit, which includes a high-performance driver, helps Windows and Linux developers build applications to receive, process, and distribute imaging data in real time.

Enhance system capability

- Receive and transmit images with ultra-low latency and jitter
- User interface controls for high-performance display
- Simultaneous connection and streaming from multiple devices

Get to market quicker

- Extensive library of video acquisition and transmission sample applications and documentation
- Focus development resources on core activities

Interoperable with GigE Vision® and GenICam™ compliant devices

GigE VISION®

GEN‹i›CAM
