

## Applied Innovations Announces Launch of Awesome DotNetNuke Cloud Hosting at DotNetNuke World 2011

*Applied Innovations launches DotNetNuke Cloud Hosting at DotNetNuke World 2011, offering attendees exclusive early access to the platform and 6 months free service!*

**BOCA RATON, FL, November 9, 2011** — [Applied Innovations](#), a cloud service provider since 1999, announced the launch of Awesome DotNetNuke Cloud Hosting, just in time for DotNetNuke World 2011. This is an elastic shared cloud hosting offering custom tailored for DotNetNuke which provides customers with dynamic load balancing so sites automatically scale across multiple web servers as needed. Attendees of DotNetNuke World 2011 in Orlando will gain early access to the platform and 6 months of free service.

The Awesome DotNetNuke Cloud Hosting platform is built on top of Applied Innovations Hyper-V Cloud. The solution allows clients to scale from 1 to 5 web servers initially and the ability to scale to even more very quickly. Not only is this the first cloud of this type built specifically and optimized for DotNetNuke, it is in fact the first cloud built to be application-specific.

“Applied Innovations has hosted DotNetNuke since its inception as the IBuySpy portal starter kit back in 2002 with the first release of ASP.NET 1.0,” stated Jess Coburn, president and CEO of Applied Innovations Corp. “Since that time we’ve hosted thousands of DotNetNuke sites and have learned a lot about supporting the application and its specific application needs.”

“Our new DotNetNuke Cloud Hosting platform leverages our 12 years of experience in Windows Web Hosting, our nearly 10 years of experience hosting .NET and DotNetNuke based websites, and our leadership in Cloud hosting and Hyper-V Cloud Servers,” continued Coburn. “It creates a new breed of hosting that’s dynamically scalable, automatically protected from web vulnerabilities, fault-tolerant and most importantly optimized for best in class application performance. This is truly an awesome product and rightfully branded as [Awesome.net](#).”

The Awesome.net cloud is built on top of Applied Innovations’ Hyper-V Cloud using Windows Server 2008 and provides full support for PHP, ASP.NET, MySQL and MS SQL.

“My sites have never performed better,” confirmed, Mark Turkel, president of [Palm Beach Software](#). Turkel was among the early beta test customers of Awesome.net and has been a long time customer of Applied Innovations. “I love that we’re able to dynamically control the load balancing and spread our sites across multiple web servers!”

Awesome DotNetNuke Cloud Hosting plans start today at just \$9.95/month and include everything needed to run a DotNetNuke based site. Although the initial launch of Awesome.net Cloud Hosting is limited to supporting DotNetNuke, the platform will soon be offered for a range of popular tools and applications.
