

Wireless Analytics Mobile Management Made Easy

Wireless Analytics is one of the pioneers in the wireless expense management arena. We help mid- to large-size companies save money and improve mobile worker productivity by managing their wireless and mobile invoicing, plans, and devices. Founder and Managing Director Erik Eames and CTO Carl Jahn, who met in college, started the company in 2003.

Our mission is to provide business process outsourcing (BPO) support and management to expanding mobile workforces throughout North America. On average, our new clients realize savings on wireless costs typically in the range of 18 to 43 percent. Based in Danvers, Massachusetts, near Boston, Wireless Analytics provides wireless expense management services including:

- **Online visibility and reporting**
- **Wireless policy development**
- **Help desk support services**
- **Cost analysis and optimization**
- **Procurement and inventory management**
- **Carrier invoice management**

Wireless Analytics provides the exclusive and proprietary CLEAN Platform™ which is a wireless telecom expense management tool. The CLEAN Platform™ provides reliable, consistent analysis as well as automated management of wireless costs and usage.

In 2011, Wireless Analytics was ranked number one in customer satisfaction among 70 large wireless mobility management firms rated by AOTMP, a leading industry research firm in fixed and mobile telecom.

Wireless Analytics serves as a BPO wireless management partner to mid- to large-sized companies. Our successful engagements include empowering companies with as few as 200 mobile devices to reduce mobile telecom costs, as well as providing Fortune 500 companies with fully outsourced wireless telecom expense management for over 10,000 devices.

Through our expertise and proprietary tools, Wireless Analytics provides wireless optimization analysis and customized, turnkey mobility management services. We make it easy to plan, deploy and manage enterprise-wide wireless devices and spending.

We help our clients set up efficient, cost-effective, company-wide mobile policies, and implement long-term strategies for device life-cycle management and wireless expense management. Our customers see immediate savings, increased productivity, and a drastic reduction in workload.

Wireless Analytics is a completely independent BPO solutions provider for wireless expense management and is not associated with any wireless provider. We are free to work with any carrier and all devices. Some of the carriers and device platforms we support include Verizon, Sprint, AT&T, T-Mobile, BlackBerry, iPhone and Android, along with many others.
