Detect ID in the Cloud
for SugarCRM

### Multi-factor Authentication for SugarCRM

Highlights

Strong authentication designed for SugarCRM

Strong authentication via device authentication

SugarCRM ready

Management and maintenance by experienced professionals

Compatible with clients running Mac OS, Windows and Linux

SugarCRM is the world's leading provider of open source customer relationship management (CRM) software. Thousands of users rely on SugarCRM to administer their marketing programs, improve their sales and build a closer relationship with their customers.

SugarCRM contains critical information about your clients, so it is vital for your organization to strengthen the way users are authenticated to prevent any information from being stolen and used in identity theft or other criminal activities.

Detect ID in the Cloud for SugarCRM is able to stop an attacker accessing your CRM, even after stealing users credentials, based on device authentication. Additionally, it avoids users from sharing credentials and signing in your CRM with unauthorized or public computers (cyber-cafes, airports, etc.).

Detect ID in the Cloud is a strong multi-factor authentication solution tailored to SugarCRM that protects your clients' sensitive data from cybercriminals, preventing phishing, identity theft and other illegal activities.

1 End–User Normal Login and Password

SugarCRM

2 Is user logging in from registered PC ?

Or is user providing correct 2nd factor authentication ?

3 Device Authentication Second Factor managed by DetectID in the Cloud

Detect ID in the Cloud for SugarCRM Features

Strong authentication designed for SugarCRM

Detect ID in the Cloud brings the power of strong authentication to SugarCRM. This solution is specially designed for SugarCRM and ready to protect your business and users' information.

Strong authentication via device authentication

Device authentication is a proven authentication scheme to stop unauthorized access to the critical data stored in your SugarCRM. Detect ID in the Cloud for SugarCRM also avoids users from sharing credentials and signing in your CRM from unauthorized places where critical data can be exposed to keyloggers and other kinds of financially motivated malware.

SugarCRM ready

Detect ID in the Cloud for Sugar CRM has been crafted specifically to be integrated with SugarCRM, and therefore it is available as a SugarCRM module.

Management and maintenance by experienced professionals

Detect ID in the Cloud for SugarCRM will always be running and up-to-date, so you don't have to be concerned about management and maintenance. The Easy Solutions team has the knowledge and experience to ensure your data is always secure.

Compatible with clients running Mac OS, Windows and Linux

Detect ID in the Cloud for SugarCRM works with the latest versions of Sugar. And because it is a web application, it is compatible with MacOS, Windows and Linux. It is also compatible with Sugar Community Edition, Sugar Enterprise and Sugar Professional.

Protect your SugarCRM data and users with **Detect ID in the Cloud for SugarCRM** sales@easysol.net
