Replay ATS
Replay SIP
Replay RTP

Recording phone calls has never been easier!

Trisys, Inc., the leader in telephone call accounting, is breaking new ground with Replay - the ultimate low cost call recording solutions. We deliver high quality digital call recording at a price affordable to any business.

Some of the reasons to record telephone conversations:

- Quality Assurance
- Regulatory Compliance
- Dispute Resolution
- Sales Verification
- Staff Training and Development
- Safety and Security

Replay T1

For connecting to T1 trunks: PRI(ISDN) or RBS.

Replay T1 will record voice activity over T1 PRI trunks. This turn-key system attaches in front of PBX or a channel bank. We provide hardware, software and cables. Basic configuration of Replay T1 has enough storage for up to 11,000 hours of voice logging. These voice files are accessed via TAPIT Call Accounting reports. This is the most cost-effective and easy to use product on the market today.

- Turn-key solution includes hardware, software and cables
- Recorded files may be stored on local or network drive
- Saved files can be e-mailed as attachments and archived for future reference
- Auto Archive facility: recorded information can be archived for permanent data storage
- Records incoming and outgoing calls
- Each Replay T1 "box" supports up to two T1s (PRI); multiple "boxes" are linked together for larger applications

Replay Recording Solution
together with **TAPIT Call Accounting**
is an invaluable tool for your business.

Replay ST

For connecting to actual phone sets.

Replay ST works with most analog and digital telephone systems. It allows recording of telephone conversations directly to your PC for later retrieval by TAPIT Call Accounting reports. Our equipment is simple, effective and affordable. Replay ST recording solution runs on your PC without the need for any additional equipment. There are two components to Replay ST: a hardware interface component that connects your telephone to a USB port on your PC, and an easy to use Windows based application that records phone conversations.

- Hardware and software easily installs on an individual PC or notebook
- Recorded files may be stored on the local or network drive
- Interface connects your telephone handset with your computer's USB port, enabling you to record telephone conversations directly to a compressed .mp3 file
- Saved files can be e-mailed as attachments and archived for future reference
- Text notes may be added during playback of recorded files for easy access to important points of the conversation
- User may select on-demand or voice activated recording
- No external power supply – Replay ST is powered by USB port of your PC
- The recorded files can be played or edited with any Windows sound recording application, including Windows Sound Editor
- Replay ST can run silently in the system tray, recording all of your phone calls
- Auto Archive\Delete facility: recorded information can be archived for permanent data storage or simply deleted.

Replay ATS

For connecting to analog ports.

Replay ATS will record voice activity over the analog ports, trunks or stations. This versatile turn-key system can be installed in the front of PBX for trunk recording, or behind the PBX for selective station recording. We provide hardware, software and cables. Basic configuration of Replay ATS has enough storage for up to 11,000 hours of voice logging. These voice files are accessed via TAPIT Call Accounting reports. This is the most cost-effective and easy to use product on the market today.

- Turn-key solution includes hardware, software and cables
- Recorded files may be stored on local or network drive
- Saved files can be e-mailed as attachments and archived for future reference
- Archive facility: recorded information can be archived for permanent data storage
- Records incoming and outgoing calls
- Each Replay ATS "box" supports up to two ATSs (PRI); multiple "boxes" are linked together for larger applications

Replay SIP

Record voice activity in a SIP-based IP PBX environment

Trisys Replay SIP is designed to record phone conversations taking place on a SIP-based IP phone systems. It runs unobtrusively on your network, monitoring SIP and RTP (audio) traffic for desired calls, and converts them into call recordings. With Replay SIP installed, authorized users can easily access call recordings for quality assurance, regulatory compliance, dispute resolution, and much more.

Replay SIP Web user interface (via TAPIT NOVA Call Accounting software) allows password-protected remote access to calls recordings, and offers over 125 reports.

For large installations, multiple PCs with Replay_VoIP can run on the same (or distributed) network – supporting anywhere from 10 to thousands of SIP phones

- 100% software solution. No hardware to install or configure
- Supports most SIP-based IP telephone systems
- Web user interface (via TAPIT NOVA Call Accounting software) allows password-protected remote access to calls, and offers over 100 reports
- Call recordings are saved as .WAV files
- Ability to e-mail call recordings
- Easily find recordings by date/time, Caller ID, dialed number, user, DNIS, call duration, extension, trunk, and more.
- Play recordings
- Download recordings
- Automatic record Archiving / Deleting

Replay RTP

Station side recording solution for IP phone systems

Trisys' Replay RTP is designed to record phone conversations that take place on IP phone systems. It runs unobtrusively on your network, monitoring VoIP (Voice over IP) traffic for desired RTP packets (audio), and converts them in to call recordings. With Replay RTP installed, authorized users can easily access call recordings for quality assurance, regulatory compliance, dispute resolution, and much more.

Features of Replay RTP:

- 100% software solution
- Supports all IP based telephone systems (must have IP phones)
- Saves recordings as WAV files
- Web user interface (via TAPIT NOVA Call Accounting software) allows password-protected remote access to calls, and offers over 100 reports
- Easily find recordings with TAPIT's flexible search capability (by date/time, extension, employee name, caller ID, dialed number, etc.)
- Download or e-mail recordings for future reference
- Automatically archives recordings for future storage
- Automatically deletes recordings at predetermined intervals
