## ***The Perfect Server for Small Business***

Resara Server and OfficeBox products are ideal server solutions for small businesses. They offer far greater simplicity and affordability than Microsoft Windows based server solutions, and have the same powerful features. Most importantly, Resara has great margins and incentives for our partners, and will work with you to close the deal.

### ***Resara OfficeBox: A NAS on Steroids?***

- OfficeBox server appliances bridge the gap between NAS devices and full-fledged servers
- Advanced server capabilities like a domain controller, user/computer management, remote file access, and much more
- OfficeBox server appliances offer a far better value to the customer than NAS devices or traditional server solutions because of their extensive features and lower costs

### ***Huge, Under-served Market***

- Every small business needs a file server and domain controller, and OfficeBox server appliances are a perfect, affordable solution for this economy
- IT consultants need new solutions to be competitive, and OfficeBox server appliances offer them a new way to quote more competitively and close new business
- Businesses that use Apple computers want an alternative to Microsoft solutions
- Businesses/Organizations that need to upgrade from Windows Server 2003 and purchase new licensing can save money with Resara OfficeBox/Server
- Schools/Government/Non-profits/Overseas are all prime candidates for Resara products

### ***Make More Money***

- Up to 20% discounts for resellers
- OfficeBox server appliances are a new, exciting product that IT consultants and small businesses want to hear about

# Explain it to Me: What is Resara Server?

Resara Server is a Linux server operating system that provides an **Active Directory compatible domain** for a businesses network . It features user and computer management, drive mapping, file serving, DNS/DHCP management, web-based remote file access, and much more. There is **no user or computer licensing**, so customers can join as many Windows, Apple, or Linux computers to their network as they want for no additional cost.

Resara OfficeBox appliances are servers with the Resara Server operating system pre-installed. Customers can choose to purchase Resara Server as a standalone software product which they can install on their own server hardware, or configure it as a VM in a VMware or other virtualized environment.

## Active Directory without Active Directory

Nearly every business, government, school, or non-profit network uses Microsoft Active Directory to manage their users, computers, file shares, and so-on. Resara Server emulates Active Directory, providing all the features of AD without the per-seat licensing.

- Simple management tools make it easier to use
- Incredibly easy to setup and excellent technical support from Resara
- No per user/connection licensing (huge savings for businesses)
- Microsoft Admin tools are compatible with Resara Server
- **Try-Before-They-Buy** - Customers can download and use a 30 day trial of Resara Server

## Target Markets

- IT Consultants that provide professional IT services to small businesses
- Small Businesses with 5-30 computers that require server solutions for shared network storage and computer/user management
- Schools/Government
- Businesses/Schools running old Netware based solutions that need a new solution
- Small-Medium size businesses (30-500+) that want Microsoft Active Directory domain management without the per-seat connection licensing costs
- Business running Apple computer products that do not want Windows server solutions
