

DocuLex Archive Studio Software Certified for Electronic Healthcare Records (EHR) Meaningful Use

The SLI EHR certification seal represents that the DocuLex Archive Studio document management solution has been tested and certified for use by healthcare providers

DocuLex has achieved the ONC-ATCB Certification™ Seal for its Archive Studio WebSearch Document Management Software. The Seal represents that Archive Studio has been tested and certified for use by healthcare providers seeking to adopt and successfully demonstrate “Meaningful Use of certified EHR technology,” to qualify for incentive funds under the American Recovery and Reinvestment Act (ARRA). The Seal indicates that the DocuLex Software Suite has passed a series of tests to prove compliance with the EHR technical standard as required by the department of Health and Human Services (HHS) Secretary.

Adoption of better document management systems by healthcare providers for patient records has been an increasing trend over the last few years based on government incentives and compliance issues. The DocuLex Archive Studio WebSearch document management software has met the applicable criteria adopted by the Secretary of Health and Human Services, and is approved for use by healthcare providers for the secure management, storage and retrieval of valuable healthcare records. By implementing the Archive Studio Document Management Software Suite, healthcare organizations can easily integrate the DocuLex software module with their existing practice management software for a complete EHR system.

With this certification, DocuLex strives to continue to provide the Healthcare world with the very best in document management technology.

Better Service. Exceptional Software. Right Solution.

About Archive Studio's WebSearch

WebSearch is the document management component of Archive Studio. WebSearch may be utilized as a service in the cloud or acquired as an on-premise server-based solution.

WebSearch is a secure, browser-based document management software that enhances internal and external collaboration, business process workflow, email archiving, corporate compliance and records retention management scheduling. The program was developed for use throughout a business's operations to regulate and streamline the flow of documentation and secure content access from any location, anytime. The WebSearch user interface is similar, yet easier to use, than internet search engines such as Microsoft Bing, Yahoo and Google. Searches are performed by entering specific index field (meta data), full text content or date ranges, search history, search lists and saved searches.

*This EHR Module is 170.302(o)-(v) compliant and has been certified by SLI Global Solutions in accordance with the applicable certification criteria adopted by the Secretary of Health and Human Services. This certification does not represent an endorsement by the U.S. Department of Health and Human Services or guarantee the receipt of incentive payments.
