

## Mobile Touch Clients

Access all your information from your mobile devices!

The DocuClass mobile solutions allow organizations leverage mobile devices by providing access to critical information to their mobile workforce on any mobile device, such as iPads, iPhones, Android phones and tablets, Blackberry phones and more. User cannot only access information, but also participate in workflows and other business processes, directly from their mobile device.

Depending on their operating system and preferences, users have two options:

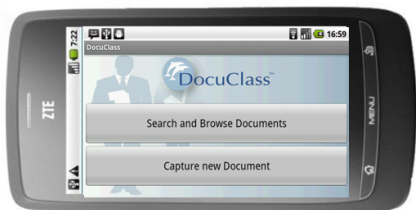

### 1. DocuClass Universal Mobile Client:

This application is 100% WEB based and optimized to work with the touch interface on modern smart phones.

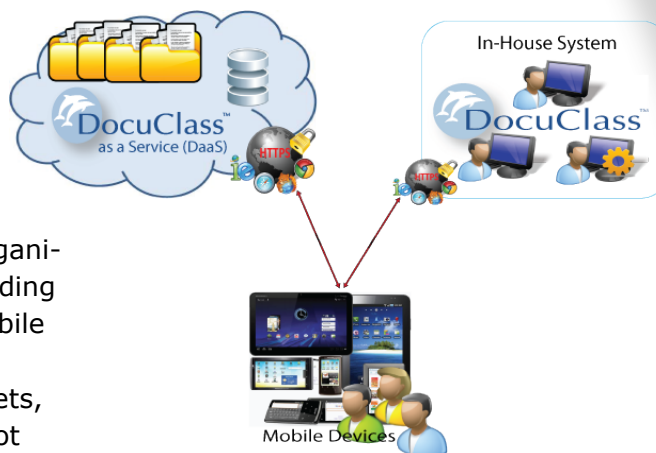

### 2. DocuClass Android App:

This application is specifically built for Android 2.1 or higher devices, since it consumes very few resources, it can be deployed on almost any device running an Android operating system. Android users can take advantage of specific functionality like GPS, adding geo-tagging information to uploaded files, or to

capture/upload images automatically to DocuClass.

Whichever mobile options fits best, users can enjoy comprehensive, instant, and centralized Information Management functions from anywhere, and companies can provide a flexible solution with all of the capabilities of a WEB based DocuClass system to their mobile workforce.

Benefits of using the DocuClass mobile client

- Browse, search, retrieve documents (have access to latest updated documents, like contracts, marketing material, orders, etc)
- Upload new documents, classify and index
- Take pictures and upload to them directly to DocuClass
- Participate in Business Workflows
  - o Search/retrieve documents from WF Queue
  - o Apply workflow commands (approve, route for evaluation, etc)
  - o Follow email links to review/approve
- Apply batch operations to selected documents (i.e. email), without transferring actual documents from the server
- Add geo-location information automatically to uploaded pictures, using device GPS (available only from DC Android Native Touch Client)
