

### Origins

Genkiosk is mature software - the most powerful management system for interactive kiosks. First designed and implemented over a decade ago, it is still owned, managed and operated by the original developers:

From the outset, Genkiosk focused on the needs of estates of kiosks providing Internet access and/or displaying information.

The scope has now grown to span all aspects of self-service kiosks, and Genkiosk is operating successfully around the globe from Europe to the Middle East, across the Pacific to the Americas.

Starting from the core Genkiosk - for standard functionality – solutions are fully customisable to client needs, from concept through to delivery.

### Kiosk management in airports

Within high visibility, high traffic environments, control, security, reliability and responsiveness are key.

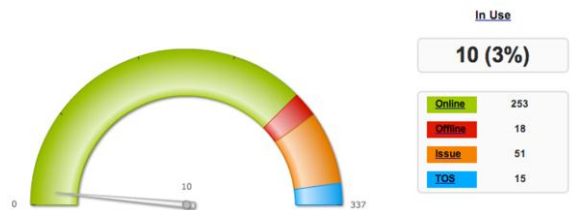

### Centralised information

The volcanic ash incident in Europe illustrated how efficiently Genkiosk keeps up to date with vast amounts of data – routine or critical.

6:51 pm		
Time	Status	
GO	7:00PM	CANCELLED
YN	7:22PM	CANCELLED
DRK	7:30PM	CANCELLED
ULLES	7:45PM	CANCELLED
	8:01PM	DELAYED

### Full security & proactive maintenance

Airports demand – and deserve – the highest levels of protection and uptime.

Genkiosk keeps estates running. Safely.

### Flexible response

Genkiosk is powerful, modular and scalable. As UK airports started charging for boarding passes, its low cost solution was to hand. Genkiosk safeguards performance now – and in the future.

Setting up, or running a self-service estate without Genkiosk? That's like trying to drive blindfold.

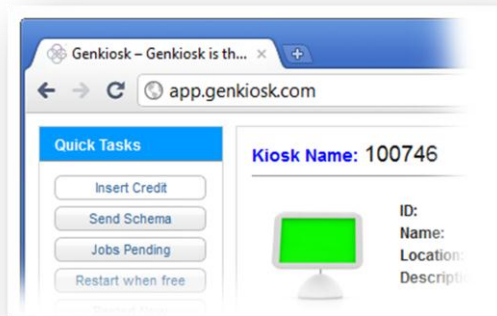

Why? Because Genkiosk puts you in touch with all your kit, reporting on performance as well as user activity.

It's as if your machines can suddenly talk – sharing their secrets:

## Retail management

Each kiosk can be controlled to maximise performance – including revenue.

And the results tracked by location, across regions or nationwide:

## Full security

Registry, file and directory security is set centrally using the content control system with schemas, so you can be sure that all the kiosks on your network are locked down and secure.

## Benefits

The advantages of Genkiosk for the end-users are straightforward. They get to do what they want easily and quickly – with minimum disruption through performance issues or downtime.

For our customers it's a lot more advanced. Genkiosk puts all the information on hand and then helps them see through the data smog with alerts, alarms and reports:
