Oxygen Forensic Suite 2012 Offers Extensive Statistical Analysis of Mobile Users' Connections

Oxygen Software announces the release of Oxygen Forensic Suite 2012 v.4.0, a major update of its flagship mobile forensic tool. The newest release provides forensic specialists with a range of powerful statistical analysis tools, enabling investigators to discover connections of the mobile user under investigation. The tools will analyze the users' contacts and social connections and quickly reveal their communication circles. Tables and visual charts will allow forensic specialists look over the user's communication circles at a single glance while analyzing all calls, messages and Skype activity in detail.

Social Connections and Statistical Analysis Tools

Oxygen Forensic Suite 2012 introduces several new statistical analysis tools offering forensic specialists the ability to quickly reveal social connections between users of mobile devices under investigation and their contacts. The newly added Communications Statistics section provides a convenient tool to explore social connections between device users and their contacts by analyzing calls, text messages and Skype activities. The activities are analyzed and presented in a table or diagram view. Table view offers in-depth analysis, while diagram view presents a quick overlook of communication circles, allowing forensic experts to determine and analyze suspects' communications at a glance.

"Automating the analysis is utterly important for our forensic customers", says Oleg Fedorov, Oxygen Software CEO. "Manually tracking down users' connections is an extremely time-consuming and labor-intensive task. The new analysis tools brought by Oxygen Forensic Suite 2012 produce a concise summary, with a graphical chart presenting the connections visible at a glance".

New High-Performance Storage

The addition of new statistical analysis tools called for the change in the underlying engine. To facilitate the increased computational demands, Oxygen Forensic Suite 2012 upgrades its internal storage to a newly implemented, advanced storage format. The new storage offers even better performance, shorter load times and faster response, while providing better integrity and reliability compared to the older format. Previous version databases will be automatically converted to the new format with all data correctly migrated.

Extended Compatibility: iPhone 4S Support, Android 2.3.5 - 3.0.1 Rooting

Oxygen Forensic Suite 2012 supports more smartphone devices than ever. The new release adds support for iPhone 4S and offers Android rooting add-on for Android OS devices versions 2.3.5 and higher. The complete list of supported Android devices includes Android platforms 1.6 through 3.0.1, which covers over 96% of all Android devices on the market.

Meet Oxygen Software at Department of Defense Cyber Crime Conference 2012

Oxygen Forensic Suite 2012 v.4.0 will be officially presented at Department of Defense Cyber Crime Conference 2012 (January 23-25, http://www.dodcybercrime.com/12CC/). Visit Oxygen Software at booth #623 during the upcoming expo in Atlanta, GA.

About Oxygen Forensic Suite 2012

Oxygen Forensic Suite 2012 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 2,500

different models, Oxygen Forensic Suite 2012 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by the user arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location.

Another signature feature of Oxygen Forensic Suite allows investigators performing a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone users.

The newly added and improved statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and Skype conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2012 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices, making it the tool of choice among government and law enforcement agencies, security services and forensic organizations in more than fifty countries.

About Oxygen Software

Founded in 2000, Oxygen Software offers the most advanced forensic data examination tools for smartphones and mobile devices. The company is dedicated in delivering the most universal forensic solution covering the widest range of mobile devices running Symbian, Windows Mobile, Blackberry, iOS, and Android operating systems. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot in the top of the list in relevant tests for extracting more data than competition.
