FOR IMMEDIATE RELEASE

James Ryan to Speak at U.S. DoD Cyber Crime Conference
–– Litmus Logic Co-Founder Selected for Proven Track Record With Large Scale
Cyber Defense and Credentialing Programs ––

POTOMAC, MD, January 5, 2012 – Litmus Logic, a global leader in implementing transformational cyber defense strategies, today announced that co-founder and President, James Ryan, has been selected to speak at the U.S. Department of Defense Cyber Crime Conference 2012.   The conference, being held January 20 through 27th in Atlanta, GA, covers all types of computer-based crime and incident response including intrusion investigations, cyber crime law, digital forensics, information assurance, as well as the research, development, testing, and evaluation of digital forensic tools.

James Ryan will be speaking about the unique nature of transformational cyber security initiatives and the imperatives to successfully execute the sweeping investments that leading companies and government agencies are making to remain effective in combating cyber crimes.

Mr. Ryan was selected to speak based on Litmus Logic's proven track record of successful transformational cyber security initiatives, including implementing the world's largest PIV and PIV-I implementations to date. Litmus Logic has been at the forefront for defining and implementing transformational cyber security strategies that protect against the advanced persistent threat. "We collaborated with NASA, HP, the FICC, and CertiPath to define what is now known as PIV-I and the ICAM segment architecture, and then we implemented these strategies for early adopters. So, we have a unique perspective of *why* these strategies were needed, and *how* to rapidly implement them to achieve the business benefits," said James Ryan. "It's an honor and a pleasure to speak at the Cyber Crime conference and share some of our expertise in managing these massive initiatives."

About Litmus Logic: Litmus Logic is a leading provider of security strategy advisory and implementation services for sovereign governments and privately owned critical infrastructure providers. The firm has pioneered 'strategy execution for cyber defense' -- the fusion of cyber security domain expertise with proven strategy implementation methods such as enterprise architecture, program management, and project management. Litmus Logic enables clients to do right things fast, in spite of complexity. Litmus Logic is a privately held Maryland-based company.
