

Spring Underbrush™

Calling all turkey hunters! Spring Underbrush™ is one of the original patterns designed for military Special Operations Forces as a woodland camo. It has proven to be remarkably effective in spring, summer, and early fall in all woodland test areas from coast to coast. That wily old gobbler and that bow season buck are in equal danger when a hunter employs Spring Underbrush™.

Winter Hardwoods™

Originally designed for waterfowl hunting and grassland, Winter Hardwoods™ has quickly become popular amongst deer hunters in deciduous forest areas as well. The versatility of Depsoc360™ shines through in this pattern. Whether you're on the plains of the Midwest hunting the flyway, or in a tree stand with your rifle, Winter Hardwoods will give you the concealment you need.

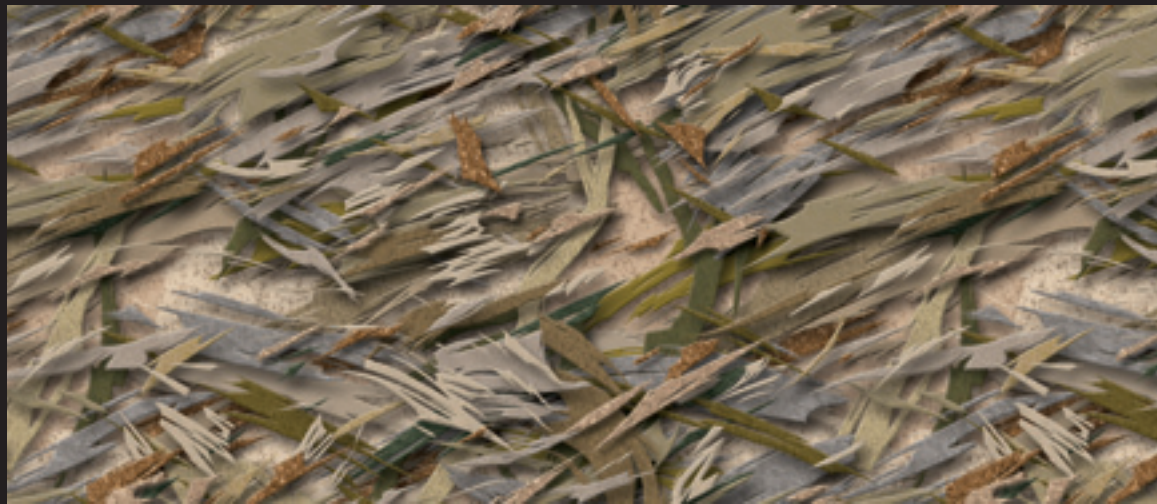

Old Desert™

Spring Melt™

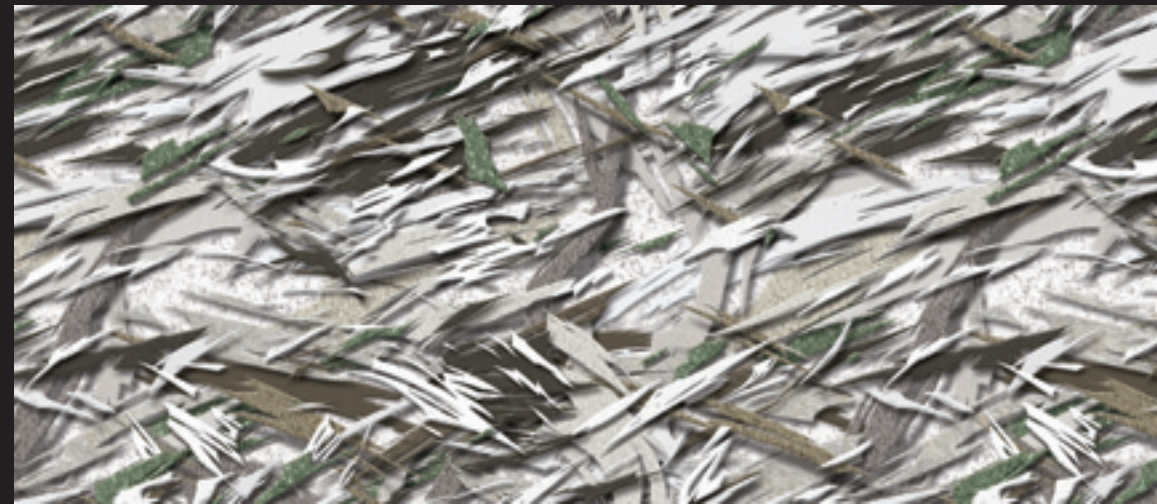

Brushland™

The other of the original patterns developed for SOF, Brushland™ is perhaps the most effective arid terrain camouflage ever developed. Its combination of base colors, contrast, and depth break the human outline like nothing before. When you're rattling for big bucks in the mesquite of South Texas, calling coyotes on the plains, or chasing mulies in the high country, Brushland™ is the answer.

Tundra™

Tundra™ is an all new take on a snow terrain camouflage. With prominent browns and greens plus a dirty white base color, this pattern allows you to take cover and vanish when snow is on the ground. Those old white coveralls are now obsolete; Tundra™ is the new standard in snow terrain camouflage. Besides the fact that this stuff works, it just looks plain cool.

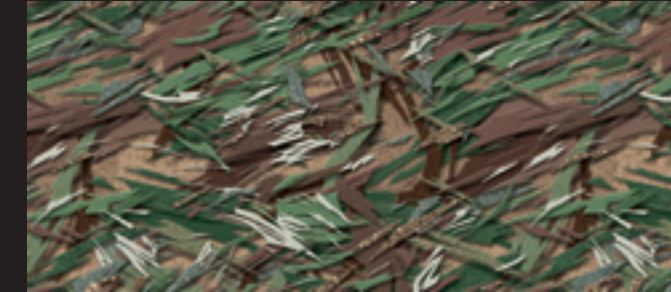

Forest Floor™

Oceanic™

Brazilian™

Collegiate Red and Black™

Back Forty™

Back Forty™ is a very versatile camouflage designed to mimic old growth forest in virtually any season. Since Depsoc360™ relies more on shape, contrast, and depth than it does color, the less region and season specific colors of Back Forty™ allow it to be a go-to pattern for many terrains and seasons. Deer season in the South will never be the same.

Trail Blaze™

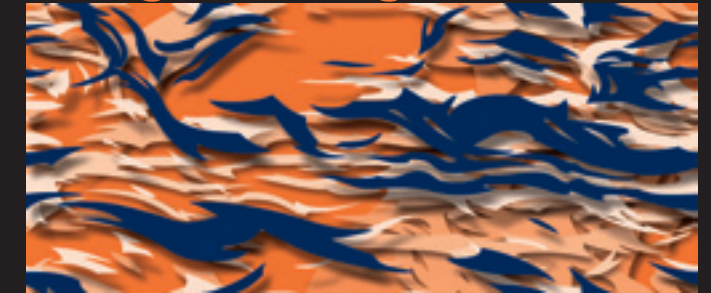

The days of sacrificing effectiveness in the name of safety are over. Trail Blaze™ allows you to have both. With approximately 80% Blaze Orange, this pattern meets most state requirements and still offers the depth and contrast that makes Depsoc360™ so great.

Medium Blaze™

Collegiate Orange and Blue™

Boulder Stream™

Collegiate Blue and Orange™
