

Smartphone Security Training Module

Keep your conversations and information safe

Using Smartphones Safely

In the age of Bring Your Own Device (BYOD) to work, organizations are at significant risk because employees are connecting smartphones to corporate networks and creating the opportunity for cyber criminals to access valuable data and network assets. The best way to protect your organization is to train your employees how to use their smartphones safely.

Don't rely on ineffective classroom, video, or PowerPoint training. To drive lasting change in employee behavior, your training should be as innovative and effective as the threats you are protecting against. Wombat delivers just what you need.

Developed using learning science principles, Wombat's Smartphone Security is an engaging and interactive software-based security training module that teaches employees how to defend against cyber criminals. In this 10-minute training module, the user learns through engaging teaching methods, realistic examples, and interactive practice.

When employees make a mistake, or answer correctly, they learn why — immediately — thereby reinforcing the learning, and lengthening retention.

Wombat's training methodology has been scientifically proven to provide better results by engaging users, increasing their learning retention, and changing their behavior.

Wombat's Smartphone training teaches employees safe practices with regard to the security of their mobile phone inside the office as well as during travel and leisure activities.

Employees learn the importance of having a PIN on their phone and how to avoid creating PINs that are easily guessed. They'll learn to avoid divulging sensitive information during conversations. The Smartphone Security training module also provides guidelines for selecting "safer" apps, which is relevant not only to smartphones, but also tablets and computers.

The screenshot shows the Wombat Smartphone Security training module interface. At the top left is the Wombat logo. The main header reads "Smartphone Security" and "Lesson 1 - Physical Security". Below this, the title "Physical Security" is displayed. The main content area features a scenario: "Determine the risk of smartphone theft: A man walks down a busy street at night with his phone clipped to his belt." Below the text is an illustration of a man walking on a street at night with a police officer. At the bottom of the scenario, there are two buttons: "Low Risk" (green) and "High Risk" (red). Below the buttons, it says "Click 'Low Risk' or 'High Risk'". The interface also includes a progress indicator "0/3" and navigation arrows.
